Software and Systems Architecture in Action Raghvinder S. Sangwan,2014-10-27 Modern day projects require software and systems engineers to work together in realizing architectures of large and complex software intensive systems To date the two have used their own tools and methods to deal with similar issues when it comes to the requirements design testing maintenance and evolution of these architectures Software and Systems Architecture in Action explores practices that can be helpful in the development of architectures of large scale systems in which software is a major component Examining the synergies that exist between the disciplines of software and systems engineering it presents concepts techniques and methods for creating and documenting architectures The book describes an approach to architecture design that is driven from systemic quality attributes determined from both the business and technical goals of the system rather than just its functional requirements

This architecture centric design approach utilizes analytically derived patterns and tactics for quality attributes that inform the architect's design choices and help shape the architecture of a given system The book includes coverage of techniques used to assess the impact of architecture centric design on the structural complexity of a system After reading the book you will understand how to create architectures of systems and assess their ability to meet the business goals of your organization Ideal for anyone involved with large and complex software intensive systems the book details powerful methods for engaging the software and systems engineers on your team The book is also suitable for use in undergraduate and graduate level courses on software and systems architecture as it exposes students to the concepts and techniques used to create and manage architectures of software intensive systems
