Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain big data is defined as any high volume high diversity biological clinical environmental and lifestyle information collected from single individuals to large cohorts in relation to their health and wellness status at one or several time points Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life opening doors to alternate therapies drugs and diagnostic tools *Signal Processing and Machine Learning for Biomedical Big Data* thus discusses modalities the numerous ways in which this data is captured via sensors and various sample rates and dimensionalities Capturing analyzing storing and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools This book covers several of these aspects in two ways firstly through theoretical signal processing chapters where tools aimed at big data be it biomedical or otherwise are described and secondly through application driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data This text aimed at the curious researcher working in the field as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis It is the hope of Drs Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field thereby improving patient quality of life Provides an overview of recent state of the art signal processing and machine learning algorithms for biomedical big data including applications in the neuroimaging cardiac retinal genomic sleep patient outcome prediction critical care and rehabilitation domains Provides contributed chapters from world leaders in the fields of big data and signal processing covering topics such as data quality data compression statistical and graph signal processing techniques and deep learning and their applications within the biomedical sphere This book's material covers how expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications

Digital Signal Processing DSP is the fundamental tool of biomedical data analysis just as a telescope is in astronomy Assuming data has been correctly gathered according to a well designed protocol the effectiveness of the application of DSP techniques determines the success of a study Unfortunately since DSP is a relatively new branch of electrical engineering and applied mathematics and is not usually included in the curricula of psychological biological or medical science educational programs the vast majority of biomedical researchers are inadequately prepared in DSP and are thus at a severe disadvantage in conducting their research The problem is not easily rectified since DSP is a technically complex area to study which at the least requires prerequisite knowledge of linear algebra calculus and the physics of electricity But without at least a working knowledge of common DSP procedures researchers are reduced to rote

Computational Intelligence in Healthcare 4 Isabelle Bichindaritz, Sachin Vaidya, Ashlesha Jain, 2010-09-08 Computational Intelligence is comparatively a

new field but it has made a tremendous progress in virtually every discipline right from engineering science business management aviation to healthcare Computational intelligence already has a solid track record of applications to healthcare of which this book is a continuation We would like to refer the reader to the excellent previous volumes in this series on computational intelligence in healthcare 1 3 This book is aimed at providing the most recent advances and state of the art in the practical applications of computational intelligence paradigms in healthcare It includes nineteen chapters on using various computational intelligence methods in healthcare such as intelligent agents and case based reasoning A number of fielded applications and case studies are presented Highlighted are in particular novel computational approaches to the semantic management of health information such as in the Web 2 0 mobile agents such as in portable devices learning agents capable of adapting to diverse clinical settings through case based reasoning and statistical approaches in computational intelligence This book is targeted towards scientists application engineers professors health professionals professors and students Background information on computational intelligence has been provided whenever necessary to facilitate the comprehension of a broad audience including healthcare practitioners
