*Birational Geometry, Kähler-Einstein Metrics and Degenerations* Ivan Cheltsov, Xiuxiong Chen, Ludmil Katzarkov, Jihun Park, 2023-05-23 This book collects the proceedings of a series of conferences dedicated to birational geometry of Fano varieties held in Moscow, Shanghai and Pohang. The conferences were focused on the following two related problems: existence of Kähler-Einstein metrics on Fano varieties, degenerations of Fano varieties on which two famous conjectures were recently proved. The first is the famous Borisov-Alexeev-Borisov Conjecture on the boundedness of Fano varieties, proved by Caucher Birkar, for which he was awarded the Fields medal in 2018, and the second one is the arguably even more famous Tian-Yau-Donaldson Conjecture on the existence of Kähler-Einstein metrics on smooth Fano varieties and K-stability, which was proved by Xiuxiong Chen, Sir Simon Donaldson, and Song Sun. The solutions for these longstanding conjectures have opened new directions in birational and Kähler geometries. These research directions generated new interesting mathematical problems, attracting the attention of mathematicians worldwide. These conferences brought together top researchers in both fields: birational geometry and complex geometry, to solve some of these problems and understand the relations between them. The result of this activity is collected in this book, which contains contributions by sixty-nine mathematicians who contributed forty-three research and survey papers to this volume. Many of them were participants of the Moscow, Shanghai, Pohang conferences, while the others helped to expand the research breadth of the volume. The diversity of their contributions reflects the vitality of modern Algebraic Geometry.

**An Introduction to Differentiable Manifolds and Riemannian Geometry**, 1975-08-22 An Introduction to Differentiable Manifolds and Riemannian Geometry **Differential Geometric Structures and Applications**

Vladimir Rovenski, Paweł Walczak, Robert Wolak, 2024-03-15 This proceedings contains a collection of selected peer-reviewed contributions from the 4th International Workshop Differential Geometric Structures and Applications held in Haifa, Israel, from May 10-13, 2023. The papers included in this volume showcase the latest advancements in modern geometry and interdisciplinary applications in fields ranging from mathematical physics to biology. Since 2008, this workshop series has provided a platform for researchers in pure and applied mathematics, including students, to engage in discussions and explore the frontiers of modern geometry. Previous workshops in the series have focused on topics such as Reconstruction of Geometrical Objects Using Symbolic Computations 2008, Geometry and Symbolic Computations 2013, and Geometric Structures and Interdisciplinary Applications 2018.

**Optimization Algorithms on Matrix Manifolds** P.-A. Absil, R. Mahony, Rodolphe Sepulchre, 2009-04-11 Many problems in the sciences and engineering can be rephrased as optimization problems on matrix search spaces endowed with a so-called manifold structure. This book shows how to exploit the special structure of such problems to develop efficient numerical algorithms. It places careful emphasis on both the numerical formulation of the algorithm and its differential geometric abstraction, illustrating how good algorithms draw equally from the insights of differential geometry, optimization, and numerical analysis. Two more theoretical chapters provide

readers with the background in differential geometry necessary to algorithmic development In the other chapters several well known optimization methods such as steepest descent and conjugate gradients are generalized to abstract manifolds The book provides a generic development of each of these methods building upon the material of the geometric chapters It then guides readers through the calculations that turn these geometrically formulated methods into concrete numerical algorithms The state of the art algorithms given as examples are competitive with the best existing algorithms for a selection of eigenspace problems in numerical linear algebra Optimization Algorithms on Matrix Manifolds offers techniques with broad applications in linear algebra signal processing data mining computer vision and statistical analysis It can serve as a graduate level textbook and will be of interest to applied mathematicians engineers and computer scientists

**Differential Equations** Peter J. Olver,2012-12-06 This book is devoted to explaining a wide range of applications of continuous symmetry groups to physically important systems of differential equations Emphasis is placed on significant applications of group theoretic methods organized so that the applied reader can readily learn the basic computational techniques required for genuine physical problems The first chapter collects together but does not prove those aspects of Lie group theory which are of importance to differential equations Applications covered in the body of the book include calculation of symmetry groups of differential equations integration of ordinary differential equations including special techniques for Euler Lagrange equations or Hamiltonian systems differential invariants and construction of equations with pre scribed symmetry groups group invariant solutions of partial differential equations dimensional analysis and the connections between conservation laws and symmetry groups Generalizations of the basic symmetry group concept and applications to conservation laws integrability conditions completely integrable systems and soliton equations and bi Hamiltonian systems are covered in detail The exposition is reasonably self contained and supplemented by numerous examples of direct physical importance chosen from classical mechanics fluid mechanics elasticity and other applied areas

The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and thrilling novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
