## CHAPTER 2

### Section 2-1

Provide a reasonable description of the sample space for each of the random experiments in Exercises 2.1.1 to 2.1.6. There can be more than one acceptable interpretation of each experiment. Describe any assumptions you make.

- 2.1.1 Each of four transmitted bits is classified as either in error or not in error.

Let  $e$  and  $o$  denote a bit in error and not in error ( $o$  denotes okay), respectively.

$$S = \left\{ \begin{array}{l} eeee, eoeo, oeee, oooo, \\ eeo o, eoe o, oe o o, oo e o, \\ eoe e, eooo, oeoe, oo oe, \\ eeo o, oo o o, ooe o, oooo \end{array} \right\}$$

- 2.1.2 The number of hits (views) is recorded at a high-volume Web site in a day.

$$S = \{0, 1, 2, \dots\} = \text{set of nonnegative integers}$$

- 2.1.3 In the final inspection of electronic power supplies, either units pass, or three types of nonconformities might occur: functional, minor, or cosmetic. Three units are inspected.

Let  $a$  denote an acceptable power supply.

Let  $f$ ,  $m$ , and  $c$  denote a power supply that has a functional, minor, or cosmetic error, respectively.

$$S = \{a, f, m, c\}$$

- 2.1.4 An oscilloscope that displays three digits is used to measure current in milliamperes.

A vector with three components can describe the three digits of the oscilloscope. Each digit can be 0, 1, 2, ..., 9.

The sample space  $S$  is 1000 possible three digit integers,  $S = \{000, 001, \dots, 999\}$

- 2.1.5 The following two questions appear on an employee survey questionnaire. Each answer is chosen from the five point scale 1 (never), 2, 3, 4, 5 (always).

Is the corporation willing to listen to and fairly evaluate new ideas?

How often are my co-workers important in my overall job performance?

Let an ordered pair of numbers, such as 43 denote the responses on the first and second question. Then,  $S$  consists of the 25 ordered pairs  $\{11, 12, \dots, 55\}$

- 2.1.6 The time until service transaction is requested of a computer to the nearest millisecond.

$$S = \{0.1, 2, \dots\} \text{ in milliseconds}$$

Montgomery, George C. Runger, 2010-08-09 Montgomery and Runger s bestselling engineering statistics text provides a practical approach oriented to engineering as well as chemical and physical sciences By providing unique problem sets that reflect realistic situations students learn how the material will be relevant in their careers With a focus on how statistical tools are integrated into the engineering problem solving process all major aspects of engineering statistics are covered Developed with sponsorship from the National Science Foundation this text incorporates many insights from the authors teaching experience along with feedback from numerous adopters of previous editions **Statistics for Business** Perumal Mariappan, 2019-05-21 Statistics for Business is meant as a textbook for students in business computer science bioengineering environmental technology and mathematics In recent years business statistics is used widely for decision making in business endeavours It emphasizes statistical applications statistical model building and determining the manual solution methods Special Features This text is prepared based on self taught method For most of the methods the required algorithm is clearly explained using flow charting methodology More than 200 solved problems provided More than 175 end of chapter exercises with answers are provided This allows teachers ample flexibility in adopting the textbook to their individual class plans This textbook is meant to for beginners and advanced learners as a text in Statistics for Business or Applied Statistics for undergraduate and graduate students *Solutions Manual to Accompany Applied Statistics and Probability for Engineers* Douglas C. Montgomery, 2002-09 **Bayesian Reliability** Michael S. Hamada, Alyson Wilson, C. Shane Reese, Harry Martz, 2008-08-15 Bayesian Reliability presents modern methods and techniques for analyzing reliability data from a Bayesian perspective The adoption and application of Bayesian methods in virtually all branches of science and engineering have significantly increased over the past few decades This increase is largely due to advances in simulation

based computational tools for implementing Bayesian methods The authors extensively use such tools throughout this book focusing on assessing the reliability of components and systems with particular attention to hierarchical models and models incorporating explanatory variables Such models include failure time regression models accelerated testing models and degradation models The authors pay special attention to Bayesian goodness of fit testing model validation reliability test design and assurance test planning Throughout the book the authors use Markov chain Monte Carlo MCMC algorithms for implementing Bayesian analyses algorithms that make the Bayesian approach to reliability computationally feasible and conceptually straightforward This book is primarily a reference collection of modern Bayesian methods in reliability for use by reliability practitioners There are more than 70 illustrative examples most of which utilize real world data This book can also be used as a textbook for a course in reliability and contains more than 160 exercises Noteworthy highlights of the book include Bayesian approaches for the following Goodness of fit and model selection methods Hierarchical models for reliability estimation Fault tree analysis methodology that supports data acquisition at all levels in the tree Bayesian networks in reliability analysis Analysis of failure count and failure time data collected from repairable systems and the assessment of various related performance criteria Analysis of nondestructive and destructive degradation data Optimal design of reliability experiments Hierarchical reliability assurance testing
