Embedded Discrete Fracture Modeling and Application in Reservoir Simulation Kamy Sepehrnoori, Yifei Xu, Wei Yu, 2020-08-27 The development of naturally fractured reservoirs especially shale gas and tight oil reservoirs exploded in recent years due to advanced drilling and fracturing techniques. However, complex fracture geometries such as irregular fracture networks and non-planar fractures are often generated especially in the presence of natural fractures. Accurate modelling of production from reservoirs with such geometries is challenging. Therefore, Embedded Discrete Fracture Modeling and Application in Reservoir Simulation demonstrates how production from reservoirs with complex fracture geometries can be modelled efficiently and effectively. This volume presents a conventional numerical model to handle simple and complex fractures using local grid refinement (LGR) and unstructured gridding. Moreover, it introduces an Embedded Discrete Fracture Model (EDFM) to efficiently deal with complex fractures by dividing the fractures into segments using matrix cell boundaries and creating non-neighboring connections (NNCs). A basic EDFM approach using Cartesian grids and advanced EDFM approach using Corner point and unstructured grids will be covered. Embedded Discrete Fracture Modeling and Application in Reservoir Simulation is an essential reference for anyone interested in performing reservoir simulation of conventional and unconventional fractured reservoirs. Highlights the current state of the art in reservoir simulation of unconventional reservoirs. Offers understanding of the impacts of key reservoir properties and complex fractures on well performance. Provides case studies to show how to use the EDFM method for different needs.

Comprehensive Dissertation Index, 1984    **Digital Hampi: Preserving Indian Cultural Heritage** Anupama Mallik, Santanu Chaudhury, Vijay Chandru, Sharada Srinivasan, 2018-03-31

The book represents the culmination of a hugely successful heritage preservation project initiated by the Government of India's Department of Science and Technology. It presents extensive research on the digital preservation of the history, mythology, art, architecture, and culture of the world heritage site Hampi in Karnataka, the seat of the Vijayanagara dynasty in medieval India. Further, the book introduces readers to a range of techniques developed by Indian technical research groups for digitally preserving both the tangible and intangible cultural heritage of the region. These techniques are sufficiently generic to be applied in heritage preservation efforts for other historical sites around the world as well. Technological advances have made it possible to not only create digital archives of these heritage artifacts but to also share these resources for people to view, explore, experience, and analyze. This book showcases how cutting-edge technology can be combined with cultural and historical research to digitize and preserve heritage. It is the consolidation of work conducted under the Indian Digital Heritage project, a unique initiative of the Department of Science and Technology (DST) Government of India. The project involved collaboration between researchers in the areas of Technology, Computer Science, Architecture, and the Humanities for the digital documentation and interpretation of India's tangible and intangible heritage. It highlights the art, architecture, and cultural legacy of the world heritage site of Hampi in Karnataka, the medieval capital of

the 14th 16th century Vijayanagara dynasty The contributors to this book are scientists and technology experts from prominent academic institutes in India such as the IITs Indian Institutes of Technology NIIT and NID National Institute of Design working in collaboration with some of India's top architects art historians anthropologists heritage groups and multi disciplinary cultural institutions such as the National Institute of Advanced Studies NIAS Their papers will introduce readers to cutting edge technologies from research areas such as computer vision 3D modeling and artificial intelligence as they are employed to preserve art and culture in the digital domain The book is divided into four parts Part 1 details efforts and techniques for modeling and representing the tangible heritage of Hampi such as the reconstruction of damaged structures realistic walk throughs and haptic rendering Part 2 includes chapters detailing the analysis and digital restoration of artifacts such as mural paintings inscriptions and sculptures as well as mobile based visual search for artifacts Part 3 includes chapters on conjectural reconstructions of the architectural life social life and traditions of Hampi Lastly Part 4 addresses the knowledge based archiving and exploration of cultural heritage *Interaction of tectono-sedimentary processes in the south china sea and their implication for hazards* Zhigang Li,Peizhen Zhang,Weiwei Ding,Shaohong Xia,Rafael Almeida,Hao Liang,2023-06-21
