Topology For Computing Cambridge Monographs On Applied And Computational Mathematics:

Topology for Computing Afra J. Zomorodian, 2005-01-10 The emerging field of computational topology utilizes theory from topology and the power of computing to solve problems in diverse fields Recent applications include computer graphics computer aided design CAD and structural biology all of which involve understanding the intrinsic shape of some real or abstract space A primary goal of this book is to present basic concepts from topology and Morse theory to enable a non specialist to grasp and participate in current research in computational topology The author gives a self contained presentation of the mathematical concepts from a computer scientist s point of view combining point set topology algebraic topology group theory differential manifolds and Morse theory He also presents some recent advances in the area including topological persistence and hierarchical Morse complexes Throughout the focus is on computational challenges and on presenting algorithms and data structures when appropriate

Geometry and Topology for Mesh Generation Herbert Edelsbrunner, 2001-05-28 The book combines topics in mathematics geometry and topology computer science algorithms and engineering mesh generation The original motivation for these topics was the difficulty faced both conceptually and in the technical execution in any attempt to combine elements of combinatorial and of numerical algorithms Mesh generation is a topic where a meaningful combination of these different approaches to problem solving is inevitable The book develops methods from both areas that are amenable to combination and explains recent breakthrough solutions to meshing that fit into this category The book should be an ideal graduate text for courses on mesh generation The specific material is selected giving preference to topics that are elementary attractive lend themselves to teaching useful and interesting

Computer Analysis of Images and Patterns Ainhoa Berciano, Daniel Díaz-Pernil, Walter Kropatsch, Helena Molina-Abril, Pedro Real, 2011-08-19 The two volume set LNCS 6854 6855 constitutes the refereed proceedings of the International Conference on Computer Analysis of Images and Patterns CAIP 2011 which took place in Seville Spain August 29 31 2011 The 138 papers presented together with 2 invited talks were carefully reviewed and selected from 286 submissions The papers are organized in topical sections on motion analysis image and shape models segmentation and grouping shape recovery kernel methods medical imaging structural pattern recognition Biometrics image and video processing calibration and tracking and stereo vision

IUTAM Symposium on Topological Design Optimization of Structures, Machines and Materials Martin Philip Bendsoe, Niels Olhoff, Ole Sigmund, 2006-10-03 This volume offers edited papers presented at the IUTAM Symposium Topological design optimization of structures machines and materials status and perspectives October 2005 The papers cover the application of topological design optimization to fluid solid interaction problems acoustics problems and to problems in biomechanics as well as to other multiphysics problems Also in focus are new basic modelling paradigms covering new geometry modelling such as level set methods and topological derivatives

The Structure and Stability of Persistence Modules Frédéric Chazal, Vin de Silva, Marc Glisse, Steve Oudot, 2016-10-08 This book is a comprehensive treatment of the

theory of persistence modules over the real line It presents a set of mathematical tools to analyse the structure and to establish the stability of such modules providing a sound mathematical framework for the study of persistence diagrams Completely self contained this brief introduces the notion of persistence measure and makes extensive use of a new calculus of quiver representations to facilitate explicit computations Appealing to both beginners and experts in the subject The Structure and Stability of Persistence Modules provides a purely algebraic presentation of persistence and thus complements the existing literature which focuses mainly on topological and algorithmic aspects Organized Collapse: An Introduction to Discrete Morse Theory Dmitry N. Kozlov, 2021-02-18 Applied topology is a modern subject which emerged in recent years at a crossroads of many methods all of them topological in nature which were used in a wide variety of applications in classical mathematics and beyond Within applied topology discrete Morse theory came into light as one of the main tools to understand cell complexes arising in different contexts as well as to reduce the complexity of homology calculations The present book provides a gentle introduction into this beautiful theory Using a combinatorial approach the author emphasizes acyclic matchings as the central object of study The first two parts of the book can be used as a stand alone introduction to homology the last two parts delve into the core of discrete Morse theory The presentation is broad ranging from abstract topics such as formulation of the entire theory using poset maps with small fibers to heavily computational aspects providing for example a specific algorithm of finding an explicit homology basis starting from an acyclic matching The book will be appreciated by graduate students in applied topology students and specialists in computer science and engineering as well as research mathematicians interested in learning about the subject and applying it in context of their fields **Distributed Autonomous Robotic Systems** Roderich Groß, Andreas Kolling, Spring Berman, Emilio Frazzoli, Alcherio Martinoli, Fumitoshi Matsuno, Melvin Gauci, 2018-03-13 Distributed robotics is an interdisciplinary and rapidly growing area combining research in computer science communication and control systems and electrical and mechanical engineering Distributed robotic systems can autonomously solve complex problems while operating in highly unstructured real world environments They are expected to play a major role in addressing future societal needs for example by improving environmental impact assessment food supply transportation manufacturing security and emergency and rescue services The goal of the International Symposium on Distributed Autonomous Robotic Systems DARS is to provide a forum for scientific advances in the theory and practice of distributed autonomous robotic systems This volume of proceedings include 47 original contributions presented at the 13th International Symposium on Distributed Autonomous Robotic Systems DARS 2016 which was held at the Natural History Museum in London UK from November 7th to 9th 2016 The selected papers in this volume are authored by leading researchers from around the world thereby providing a broad coverage and perspective of the state of the art technologies algorithms system architectures and applications in distributed robotic systems The book is organized into seven parts representative of critical long term and emerging research thrusts in the multi robot community Distributed Coverage and
