

MAINTENANCE

REPLACING SPARK PLUG

Correct spark plug to use is a Champion RJ-17LM or Autolite AR7N, and correct air gap is 0.030 of an inch (0.76 mm). Since air gap between center and side electrodes of the spark plug increases gradually during normal engine operation, install a new plug after every 25 hours of engine operation.

1. Clean area around spark plug so foreign matter cannot fall into cylinder when plug is removed.

2. Pull high tension wire off spark plug and remove plug from cylinder head.

IMPORTANT: A cracked, fouled, or dirty spark plug must be replaced. Do not sand blast, scrape, or clean electrodes, because grit may eventually release from the plug and fall into the cylinder. The result will likely be engine damage.

3. Set air gap between electrodes of new spark plug at 0.030 of an inch (0.76 mm), (Fig. 32). Next, install spark plug in cylinder head. Tighten plug to 15 ft-lb (20.4 N-m). If torque wrench is not used, tighten plug firmly.

power adjusting screw 1 full turn — 360° — counterclockwise.
