The case studies and evidence based practice dialogues provide great opportunities for further reflection. Department of Bibliography, 1978 *HADI PRACTICAL NEONATOLOGY BOOK 1* ABDELHADI ABDELGABBAR ABDELHADI, 2024-01-24 Hadi Practical Neonatology a 2 book series of practical guidelines is intended to provide a structured approach to the management of neonatal conditions which are likely to face the neonatal team. It is not intended to replace textbooks or to teach the beginners in the field. Prior sound knowledge of Neonatal Medicine by the user is essential. This book is the first in the series. It covers aspects of RESUSCITATION, THERMAL CONTROL, RESPIRATORY, CARDIOVASCULAR, INFECTIONS, ENDOCRINE, METABOLIC, GASTROINTESTINAL, NUTRITION, DERMATOLOGY and SURGICAL NEWBORN challenges. It is my belief that neonatal doctors and nurses are an integrated team and any demarcation is an imaginary line. The recipe of creating a backbone of good nurses is passionate support, continuous education and practical teaching at every possible opportunity. Mutual trust and appropriate delegations are crucial to the success of the team. HADI PN series is written for the neonatal team and not just for the medical staff. The best way for consolidating the team knowledge and experience is bedside teaching. New methods and approaches of neonatal management are progressing but seem to slow down over the last few years. This may reflect the fact that neonatal advances are approaching our era peak of what is possible. Nevertheless, many of our current practices are yet to be scrutinized to fulfil the evidence based standards. There is no robust verification of the evidence behind our current practice of many routine day to day applications. This includes but is not limited to fluid requirements, duration of antibiotics courses, use of various blood products, seizures, pharmacological treatment and safe PaCO₂ levels. I have reviewed multiple medical and nursing guidelines from Europe, North America and Australia as well as Asia, South America and Africa. I integrated many of these guidelines within this book whenever they are in accord with the

international acceptable practices Feedback and suggestions are welcome and can be sent to neonatologypractical@gmail.com The book is an updated version of the protocols and guidelines which I have developed during my work as Consultant Neonatologist Some are adopted from various reputable institutes and modified to reflect the current evidence plus a slight flavour of my experience Considerable effort has been exercised to ensure the doses of medications given in HADI PN are accurate However further confirmation by the nursing and medical staff is advised prior to the first use of each medication HADI PN reflects the author's own acceptable and safe practice and advice It is written with the intention of facilitating the delivery of care to the most vulnerable newborn The publication is written bearing in mind the wide variations in the skill mix of neonatal practitioners nurses and doctors Likewise the challenge **Practical Neonatology** Talia Atkins, 2021-11-16

HADI NEONATAL CLINIC COMPANION DR. ABDELHADI ABDELGABBAR ABDELHADI, The neonatal clinic is an enjoyable yet challenging experience for the beginners as well as the experts The execution of a thorough assessment is easier in the setting of the Neonatal Unit environment where multiple players in the team are always there to plug any gaps you may have missed Furthermore the context of the clinic is totally different from the scene in NICU The conditions presenting to the clinic may bear no relevance to the usual medical problems encountered while the newborn is still in the hospital Furthermore many neonatal conditions come to light only after discharge while others require different approach as the acute condition's ramifications are endless The parents are usually well prepared to explore all the aspects of the presenting condition They expect to leave the clinic with satisfactory explanations and amicable solutions Small issues may cause them great anxiety if the clinician is not able to reassure them factually, confidently and honestly They do not expect or imagine the condition may also be new to the clinician Systemic approach always pays dividends A thorough history is the key to unlock most issues This requires a good listener sound background knowledge and experience to extract the relevant facts during the short time slot available in the clinic The assessment is always deficient if the examination is hurried and

limited to a targeted system Head to toe front and back examinations are mandatory Tailored investigation if necessary complete the picture This book HADI NEONATAL CLINIC COMPANION is intended to help the trainees in Neonatology as well as the well established Neonatologist to gather their thoughts during the neonatal clinic I have tried to spell out the steps required to tackle many presentations I have left out some follow up issues of major challenges stemming from NICU like Chronic Lung Disease Neonatal Fits Post Haemorrhagic Hydrocephalus and NEC I may add these to next edition if I find a suitable formula to present the follow up requirements Most problem solving frames within this book reflects my own approach which may be different to other Neonatologist s approaches Please feel free to email me at hadihuda yahoo com if you feel an alterations corrections additions or omissions are necessary I would welcome colleagues who would like to author new topics or rewrite existing topics *MANUAL OF NEONATAL INTENSIVE CARE 3E* N R C Roberton,1993-02-04 The third edition of this successful book has been extensively updated and revised to provide the busy paediatrician or nurse working in neonatal or intensive care units with precise instructions on the diagnosis and management of common neonatal problems The book concentrates on resuscitation of the newborn and common respiratory cardiac infective and metabolic problems It includes the latest advances in the treatment of respiratory failure and gastroenteritis In addition it provides an outline of the physiological basis for illness in the child and of the subsequent management period
