Microsoft's catch phrase for Visual Studio 2005 is personal productivity. The goal of personal productivity is to allow the developer to work at a higher level of abstraction. The goal of this book is to show the reader how to build applications using these productivity features of VS. As a result, language syntax and programming constructs are de-emphasized in favor of showing the user how to let VS generate the code. This book takes a layered approach similar to how most applications are architected. When developing a new application, developers often divide up the work for the user interface, service layer, data access, and domain classes coding. Whether there is one developer playing all three roles or three developers doing each, this approach allows the reader to easily reference the layer they are constructing.
