A basic understanding of JavaScript and HTML is the only prerequisite for this book. What You Will Learn: Work with Node.js building blocks. Write and configure a web server using Node.js powered by the Express.js framework. Build dynamic HTML pages using the Handlebars template engine. Persist application data using MongoDB and Mongoose ODM. Test your code using automated testing tools such as the Mocha framework. Automate test cases using Gulp. Reduce your web development time by integrating third party tools for web interaction. Deploy a development environment to the cloud using services such as Heroku, Amazon Web Services and Microsoft Azure. Explore single page application frameworks to take your web applications to the next level. In Detail: Node.js builds fast scalable network applications while MongoDB is the perfect fit as a high performance open source NoSQL database solution. The combination of these two technologies offers high performance and scalability and helps in building fast scalable network applications. Together they provide the power for managing any form of data as well as speed of delivery. This book will help you to get these two technologies working together to build web applications quickly and easily with effortless deployment to the cloud. You will also learn about Angular 4 which consumes pure JSON APIs from a hapi server. The book begins by setting up your development environment running you through the steps necessary to get the main application server up and running. Then you will see how to use Node.js to connect to a MongoDB database and perform data manipulations. From here on the book will take you through integration with third party tools to interact with web apps. You will see how to use controllers and view models to generate reusable code that will reduce development time. Toward the end the book supplies tests to properly execute your code and take your skills to the next level with the most popular frameworks for developing web applications. By the end of the book you will have a running web application developed with MongoDB, Node.js and some of the most powerful and popular frameworks.
