Experimente de fizică pentru elevi și studenți Nicolae Sfetea, 2025-09-14

Cartea explorează rolul central al experimentelor în predarea învățării fizicii punând accent pe importanța lor formativă. Lucrarea argumentează că laboratorul de fizică este un mediu unic de învățare activ unde elevii trec de la memorarea pasivă a formulelor la descoperirea și verificarea directă a conceptelor. Sunt prezentate fundamentele teoretice ale învățării prin investigație și constructivism, apoi o varietate de experimente de la măsurarea accelerării gravitaționale a legea lui Ohm și mișcarea pendulară amortizată până la interferența luminii efectul fotoelectric și determinarea constantei lui Planck. Cartea discută și valoarea laboratoarelor virtuale ca suport complementar subliniind că acestea pot creă eficiență și accesibilitatea învățării dar nu pot înlocui complet experiența practică. Autorul abordează impactul experimentelor asupra motivării și criticii colaborării în formării unei vizionări învățării integrate. Sunt analizate provocările implementării în curriculum, resursele limitate și rezistența la schimbare și ofertele soluțiilor pentru depărtarea lor. În ansamblu, volumul este atât un ghid practic de experimente cât și o pledoarie pentru integrarea lor sistematică în educația STEM. Construction 4.0 Anil Sawhney, Michael Riley, Javier Irizarry, 2020-02-06. Modelled on the concept of Industry 4.0, the idea of Construction 4.0 is based on a confluence of trends and technologies that promise to reshape the way built environment

assets are designed constructed and operated. With the pervasive use of Building Information Modelling BIM lean principles digital technologies and offsite construction the industry is at the cusp of this transformation. The critical challenge is the fragmented state of teaching research and professional practice in the built environment sector. This handbook aims to overcome this fragmentation by describing Construction 4.0 in the context of its current state emerging trends and technologies and the people and process issues that surround the coming transformation. Construction 4.0 is a framework that is a confluence and convergence of the following broad themes discussed in this book: Industrial production prefabrication 3D printing and assembly; offsite manufacture; Cyber physical systems; actuators; sensors; IoT; robots; cobots; drones; Digital and computing technologies; BIM; video and laser scanning; AI and cloud computing; big data and data analytics; reality capture; Blockchain; simulation; augmented reality; data standards and interoperability; and vertical and horizontal integration. The aim of this handbook is to describe the Construction 4.0 framework and consequently highlight the resultant processes and practices that allow us to plan, design, deliver and operate built environment assets more effectively and efficiently by focusing on the physical to digital transformation and then digital to physical transformation. This book is essential reading for all built environment and AEC stakeholders who need to get to grips with the technological transformations currently shaping their industry research and teaching.
