Rethinking Medical Humanities Rinaldo F. Canalis,Massimo Ciavolella,Valeria Finucci,2022-12-19 Medical Humanities may be broadly conceptualized as a discipline wherein medicine and its specialties intersect with those of the humanities and social sciences As such it is a hybrid area of study where the impact of disease and healing science on culture is assessed and expressed in the particular language of the disciplines concerned with the human experience However as much as at first sight this definition appears to be clear it does not reflect how the interaction of medicine with the humanities has evolved to become a separate field of study In this publication we have explored through the analysis of a group of selected multidisciplinary essays the dynamics of this process The essays predominantly address the interaction of literature philosophy art art history ethics and education with medicine and its specialties from the classical period to the present Particular attention has been given to the Medieval Early Modern and Enlightenment periods To avoid a rigid compartmentalization of the book based on individual fields of study we opted for a fluid division into multidisciplinary sections reflective of the complex interactions of the included works with medicine

Epistemology of the Human Sciences Walter B. Weimer,2022-11-16 This book argues for evolutionary epistemology and distinguishing functionality from physicality in the social sciences It explores the implications for this approach to understanding in biology economics psychology and political science Presenting a comprehensive overview of philosophical topics in the social sciences the book emphasizes how all human cognition and behavior is characterized by functionality and complexity and thus cannot be explained by the point predictions and exact laws found in the physical sciences Realms of functional complexity such as the market order in economics the social rules of conduct and the human CNS require a focus on explanations of the principles involved rather than predicting exact outcomes This requires study of the historical context to understand behavior and cognition This approach notes that functional complexity is central to classical liberal ideas such as division of labour and knowledge and how this is a far more powerful and adequate account of social organization than central planning Through comparison of these approaches as well as its interdisciplinary scope this book will interest both academics and students in philosophy biology economics psychology and all other social sciences

The World of Psychology Samuel E. Wood,2001 The World of Psychology offers an accessible text that is designed to

seamlessly combine basic learning principles with applications to address the needs of today's diverse student population. The 6th edition of Wood Wood Boyd reflects the authors' commitment to the importance of learning and applying core principles in psychology. Students and Instructors of The World of Psychology will benefit by engaging in learning core concepts and applying them to the world we know. Biology and Behavior, Sensation and Perception, States of Consciousness, Learning, Memory, Cognition, and Language, Intelligence and Creativity, Child, Adolescent, and Adult Development, Motivation and Emotion, Human Sexuality and Gender, Health and Stress, Personality Theories, Psychological Disorders and Therapies, Introduction to Psychology, Medical and Health Care Books and Serials in Print, 1997, *Intelligent Systems* Alexander M. Meystel, James S. Albus, 2002. This comprehensive treatment of the field of intelligent systems is written by two of the foremost authorities in the field. The authors clearly examine the theoretical and practical aspects of these systems. The book focuses on the NIST RCS Real time Control System model that has been used recently in the Mars Rover, **Real Brains, Artificial Minds** J. L. Casti, Anders Karlqvist, 1987, *Psychological Dynamics of Sport* Diane L. Gill, 1986. This is a popular introductory text to the discipline of sport psychology for students with no previous background in the field. It is a comprehensive, well-organized, clearly written presentation of basic sport psychology theory and research, *Another Door to Learning* Judy Schwarz, 1992. Judy Schwarz and Carol Stockdale have been exploring learning disabilities for two decades and have witnessed the remarkable breakthroughs of more than a thousand learning disabled individuals. *Another Door to Learning* tells some of these amazing and inspiring stories. The reader gets to meet Tyler, whose first grade teacher described his reading as like a fisherman throwing his language out onto the print like a net flung over the water, which once understood is exactly how he began to learn to read. Frank, husband and father, who could build a house and everything in it but was illiterate and who learned to read by first learning to rhyme, forty year old Lucille, whose speech was so confused she couldn't talk on the telephone but who learned to put language together by playing with a puzzle, nineteen year old Janine, who would get lost on the way to her own mailbox but conquered her spatial disability by discovering how to map her environment and script events, and many more unforgettable people who overcame common and sometimes bizarre learning disabilities. Narrated with compassion, humor, and gentleness, *Another Door to Learning* will inspire everyone with its stories of atypical learners helping to show how a lasting difference can be made in the lives of these fascinating people, **Mind as Machine** Margaret A. Boden, 2006, Psychology Philip G. Zimbardo, Ann L. Weber, 1994. The goal of the authors is to present an enriched view of psychological knowledge that combines the basic accumulated wisdom from scientific psychology with the contemporary views of human nature that emerge from the study of human diversity.
