2000 4th International Conference on Algorithms and Architectures for Parallel Processing Andrzej Go?ci?ski,2000 ICA3PP 2000 was an important conference that brought together researchers and practitioners from academia industry and governments to advance the knowledge of parallel and distributed computing The proceedings constitute a well defined set of innovative research papers in two broad areas of parallel and distributed computing 1 architectures algorithms and networks 2 systems and applications

Parallel Processing and Parallel Algorithms Seyed H Roosta,2012-12-06 Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive ex pansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel process ing structures can be employed The concept of parallel processing is a depar ture from

sequential processing In sequential computation one processor is in volved and performs one operation at a time On the other hand in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing From the practical point of view this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms Parallel processing involves utilizing several factors such as parallel architectures parallel algorithms parallel programming lan guages and performance analysis which are strongly interrelated In general four steps are involved in performing a computational problem in parallel The first step is to understand the nature of computations in the specific application domain

Parallel Processing for Artificial Intelligence 2 V. Kumar,H. Kitano,C.B. Suttner,2014-06-28 With the increasing availability of parallel machines and the raising of interest in large scale and real world applications research on parallel processing for Artificial Intelligence AI is gaining greater importance in the computer science environment Many applications have been implemented and delivered but the field is still considered to be in its infancy This book assembles diverse aspects of research in the area providing an overview of the current state of technology It also aims to promote further growth across

the discipline Contributions have been grouped according to their subject architectures 3 papers languages 4 papers general algorithms 6 papers and applications 5 papers The internationally sourced papers range from purely theoretical work simulation studies algorithm and architecture proposals to implemented systems and their experimental evaluation Since the book is a second volume in the parallel processing for AI series it provides a continued documentation of the research and advances made in the field The editors hope that it will inspire readers to investigate the possibilities for enhancing AI systems by parallel processing and to make new discoveries of their own

Execution Support Environment Teodor Rus,Daniela Rus,1994 SYSTEM SOFTWARE AND SOFTWARE SYSTEMS Concepts and Methodology is intended to offer a systematic treatment of the theory and practice of designing and implementing system software The two volumes systematically develop and apply the systems methodology for software development For that the concept of a system is analysed and various types of systems used in computer science are systematized into a concept of an ad hoc system that is suitable as a mechanism for software development The kernel of this methodology consists of a systematic approach for ad hoc systems development specification implementation validation The hardware and the software of a computer system are specified as ad hoc systems Examples from various architectures languages and operating systems are provided as illustrations Problems and their suggested solutions are provided at the end of each chapter Further readings and a list of references conclude each chapter These volumes are self contained and may be used as textbooks for an introductory course on system software and for a course on operating system However a broad spectrum of professionals in computer science will benefit from it
