

Chapter 1: Getting Started with Python

Setting Up Your Python Environment

In this chapter, we'll embark on our Python journey. First, let's install Python. Visit python.org and download the latest version for your operating system. Once installed, open a command prompt or terminal and type `python`. You should see the Python version and the interactive shell prompt `>>>`.

Example:

```
>>> print("Hello, Python!")
```

Hello, Python!

Chapter 2: Variables and Data Types

Storing and Manipulating Data

In Python, variables are used to store data. You can declare a variable like this:

```
name = "John"
```

```
age = 30
```

```
height = 5.9
```

Here, `name` is a string, `age` is an integer, and `height` is a float.

Example:

```
name = "John"
```

```
print("Hello, my name is", name)
```

Chapter 3: Control Structures

Making Decisions and Looping

Conditional statements allow your program to make decisions. For instance, consider a program to check if a number is even:

```
num = 10
```

```
if num % 2 == 0:
```

```
    print(num, "is even")
```

```
else:
```

```
    print(num, "is odd")
```
