#### Objectives:

- Describe the gross structure of the spinal cord, including the arrangement of its gray matter and white matter.

The gray matter is in the inner region of the spinal cord surrounded by white matter.

White matter is composed into 3 types: Ascending, descending, and Commissural.

Divided into 3 funiculi (dorsal, ventral, and lateral)

Gray matter made of neuron cell bodies. Gray commissure is the narrow central cavity of the central canal. Dorsal and ventral horns. Lateral horns. Organized functionally.

Dorsal horns consist of interneurons. Interneurons receive info from sensory neurons whose cell bodies lie outside the spinal cord in dorsal root ganglia and reach the spinal cord via dorsal root. Ventral horns contain cell bodies of motor neurons and send their axons out the spinal cord via ventral roots.

- Describe the meningeal coverings surrounding the spinal cord and explain how the meninges and cerebrospinal fluid protect the structures of the central nervous system: Superficial → deep : dura mater, arachnoid, pia mater. Meninges cover and protect the CNS. Enclose and protect the BVs that supply the CNS, contain CSF.

Dura mater: strongest and is made of dense fibrous CT. Superficial periosteal layer attaches to skull and meningeal layer forms true cover of brain. The two layers fuse together and are separated to enclose the dural venous sinuses. The dural sinus collects blood from the brain and conducts it to the jugular veins of the neck. Limits movement of brain within the cranium. Breaks up into 3 partitions. Falx cerebri: lies in longitudinal fissure. Falx cerebelli and tentorium.

Arachnoid mater: between arachnoid and dura mater is subdural space with film of fluid. Called potential space because it can fill with substantial fluid or blood when injured. Deep to arachnoid is subarachnoid space that hold arachnoid mater to pia mater. Also is filled with CSF and contains largest BVs supply to the brain. Arachnoid villi are over the superior part of the brain that project thru the dura mater and act as valves to allow CSF from the subarachnoid space to the dural venous sinuses.
