

## Unit 6: Study Guide

### Developmental Psychology

The concept that development is a lifelong process is basic to the study of developmental psychology. By development, psychologists mean changes over time in characteristics such as physiology, emotion, perception, cognition, and memory, particularly as the change relates to periods like infancy, childhood, adolescence, and adulthood. Thus, students need to consider from a life-span perspective the major dimensions in which development takes place and the role that gender plays within each dimension. These dimensions are physical, cognitive, social, and moral. The questions of greatest current interest to developmental psychologists are whether development is continuous or discontinuous and to what extent genetics, physiology, culture, and external environment (i.e., nature vs. nurture) influence the course of development. Closely connected to both of these questions are the concepts of critical or sensitive periods and culture.

One successful way to introduce students to the study of developmental psychology is to discuss the major criteria that psychologists use in judging observations of developmental phenomena. Following this introduction, students are ready to consider such techniques of data collection as self-report, naturalistic observation, the experimental method, and clinical methods, as well as the research designs used by developmental psychologists are longitudinal, cross-sectional, or some combination of the two, each of which has its own requirements for data gathering.

As students progress through this section of the course, they learn about the different theories of development, for example, those of Erik Erikson, Carol Gilligan, Lawrence Kohlberg, Elisabeth Kübler-Ross, Jean Piaget, and Lev Vygotsky. As with other areas of psychology the specific changes investigated by developmental psychologists are ultimately understandable in the context of some theory; that is, a broad framework or body of principles that can be used to interpret the changes. Such a theory must relate developmental changes over time to important independent variables.

**CR9:** The course provides instruction in developmental psychology

**CR15:** As relevant to each content area, the course provides instruction in empirically-supported psychological facts, research findings, terminology, associated phenomena, major figures, perspectives, and psychological experiments
