Measurement Levels

Qualitative: Measurements are assigned to categories that differ qualitatively, but have no quantitative order (e.g., depressed, stable, anxious, etc.).

Ordinal: The values have an order that can be represented by numbers, but the numbers cannot be mathematically treated. However, the numbers imply that the equal (or unequal) number of steps separating the levels of quality or quantity.

Interval: The scale is like order in the sense that numbers along the scale are related one to another mathematically (e.g., temperature). But even on the scale that has mathematically equal intervals of the variable being measured (e.g., IQ scores).

Ratio: This scale has the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured). For instance, intelligence provides both the property, $x + 10$ is 10 units higher than x (interval) and $2x$ is twice as much as x (ratio). The interval property is defined by $x + 10$ is 10 units higher than x and the ratio property is defined by $2x$ is twice as much as x .

The Measurement Type

The measurement level (order-type) is a mathematical level that reflects properties and processes. Qualitative is a categorical variable, ordinal-type is a measurement level that is like the measurement level with a unique origin (absence of the variable being measured) (e.g., IQ). This is a mathematical level that reflects properties and processes. Interval is a measurement level that is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured). This measurement level is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured).

$$x + 10$$

The following "1" provided with "1" is a mathematical level that is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured). This measurement level is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured). This measurement level is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured).

Subdivisions of Measurement

Qualitative Measurement: It is a measurement level that is like the interval property (the zero point is arbitrary) as well as a unique origin (absence of the variable being measured).
