

## MANUAL TESTING

## AUTOMATION TESTING

PROS	CONS	PROS	CONS
fast, and accurate feedback	is carried out by a human, therefore, it is prone to errors, omissions, and mistakes	since most of the testing processes are automated, we can get the quick and efficient process	more expensive, as it needs specialized tools or processes which can increase the cost of the entire project
human judgment and intuition are a massive help in the process	manual testing cannot be captured/recorded - it's not reusable	the automation process is scripted; this allows you to reuse, and perform the same test operations	it isn't easy to test the visual aspects such as colors, fonts, contrast, and button sizes
when testing a small change, the automation test would require coding, which would be time-consuming	some tasks are difficult to perform manually, which may require additional testing time	is performed using tools, so it works without random mistakes	each tool has its limitations, which reduces the scope of automation itself
 sunscraper	time-consuming even when it comes to running the same testing scenario	gives fast and accurate results	debugging the test script is another major problem
		supports different kinds of applications	maintaining the tests is costly
