Indonesian Papua Part One Andrew J. Marshall, Bruce M. Beehler, 2011-07-19 The Ecology of Papua provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western Indonesian New Guinea Designed for students of conservation environmental workers and academic researchers it is a richly detailed text dense with biogeographical data historical reference and fresh insight on this complicated and marvelous region We hope it will serve to raise awareness of Papua on a global as well as local scale and to catalyze effective conservation of its most precious natural assets New Guinea is the largest and highest tropical island and one of the last great wilderness areas remaining on Earth Papua the western half of New Guinea is noteworthy for its equatorial glaciers its vast forested floodplains its imposing central mountain range its Raja Ampat Archipelago and its several hundred traditional forest dwelling societies One of the wildest places left in the world Papua possesses extraordinary biological and cultural diversity Today Papua's environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels It is important that Papua's leadership balance economic development with good resource management to ensure the long term well being of its culturally diverse populace Asia-Pacific roadmap for primary forest conservation

Laumonier, Y., Azzu, N., Adzan, G., Narulita, S., Khikmah, F., Meybeck, A., Pingault, N., Gitz, V., 2022-07-31 **Asia-Pacific roadmap for primary forest conservation** Laumonier, Y., Azzu, N., Azdan, G., Narulita, S., Khikmah, F., Meybeck, A., Pingault, N., Gitz, V., 2022-08-12 The purpose of the roadmap is to delineate and inform the process by which decision makers and actors can evaluate the status diversity and trends of primary forests in the region identify priority areas for primary forest conservation assess the threats they face and explore possible ways to address them This report suggests a practical process in four steps through which the recommendations can be articulated at different scales from regional to local and adapted to the specific context priorities and needs of various forest types countries and categories of actors

Tropical Fire Ecology Mark Cochrane, 2010-04-11 The tropics are home to most of the world's biodiversity and are currently the frontier for human settlement Tropical ecosystems are being converted to agricultural and other land uses at unprecedented rates Land conversion and maintenance almost always rely on fire and because of this fire is now more prevalent in the tropics than anywhere else on Earth Despite pervasive fire human settlement and threatened biodiversity there is little comprehensive information available on fire and its effects in tropical ecosystems Tropical deforestation especially in rainforests has been widely documented for many years Forests are cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops However fires do not always stop at the borders of cleared

forests Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries The numerous ecosystems of the tropics have differing levels of fire resistance resilience or dependence At present there is little appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types

The National Parks of Indonesia Jatna Supriatna,Chris Margules,2025-08-30 This book contains information on geographic location and park size climate topography history of each park and biodiversity and ecosystems It also contains information on local communities adjacent to each park or in some cases within the parks and their culture tourism opportunities access tourist facilities nearby and how to find the park office to get a visitor s permit The 55 parks currently declared span the length and breadth of the country They provided the last remaining refuges for many of

Indonesia s charismatic species such as tigers elephants rhinoceros and orangutans **Shifting Cultivation Policies** Malcolm Cairns,2017-11-13 Shifting cultivation supports around 200 million people in the Asia Pacific region alone It is often regarded as a primitive and inefficient form of agriculture that destroys forests causes soil erosion and robs lowland areas of water These misconceptions and their policy implications need to be challenged Swidden farming could support carbon sequestration and conservation of land biodiversity and cultural heritage This comprehensive analysis of past and present policy highlights successes and failures and emphasizes the importance of getting it right for the future This book is enhanced with supplementary resources The addendum chapters can be found at www.cabi.org/openresources 91797

Biodiversity, Evolution and Biogeography of Plants ,2001 **Journal of Tropical Forest Science** ,1999 Monograph of Mitrephora (Annonaceae) Aruna D. Weerasooriya,Richard M. K. Saunders,2010 The genus Mitrephora Annonaceae comprises 47 species of small to medium sized trees growing in tropical lowland and submontane forests throughout Southeast Asia The centers of diversity lie in Borneo where there are 12 species and the Philippines where there are 11 species The flowers are pendent and hermaphroditic with two whorls of petals of which the outer petals are larger The inner petals are apically connivent over the productive structures forming a partially enclosed pollination chamber with small apertures between the basal claws of the petals that enable entry by pollinators A field study of the pollination ecology of *M. heyneana* in Sri Lanka the first such study for the genus revealed pollination by small nitidulid beetles although it is possible that other species may be fly pollinated This monograph is the first comprehensive taxonomic revision of the genus The work is based on a comprehensive study of comparative morphology and anatomy including a survey of previously published work Conservation assessments are provided for each species according to current IUCN Red List categories and criteria All species are mapped and many are illustrated with line drawings and or photographs Separate keys for flowering and fruiting material are included as well as regional keys Seven new species *M. amdjahii* *M. endertii* *M. kostermansii* *M. multifolia* *M.*
