The Way Of Knowledge Managing The Unmanageable:

The Way of Knowledge Stowe Boyd, 2000 Learning and knowledge in business is undergoing a dramatic and necessary revolution Business leaders are redefining the concept of leadership and reevaluating the basic premises of management in the knowledge driven company Knowledge management is a slippery concept Knowledge is a set of related beliefs and experiences in the mind of an individual not a physical asset like capital equipment How can we manage that which resides with the minds of others intangible and invisible How can we manage the unmanageable Rather than a how to manual for mounting knowledge management initiatives in this book Stowe Boyd examines the new realities for business The value of a business is no longer principally based on tangible assets but on intangibles Information technology is the prime mover of the new economy and those who master IT increase their chances of success Our ways of management a largely leftover from the industrial era of the immediate past and are not naturally workable in the new business context In exploring the contradictions posed by the old and the new economic order business leaders learn to balance the apparently opposing interests of delivering value to customer and encouraging the development and sharing of knowledge in the firm

Acquisition and Understanding of Process Knowledge Using Problem Solving Methods J.M. Gómez-Pérez, 2010-07-08 The development of knowledge based systems is usually approached through the combined skills of knowledge engineers KEs and subject matter experts SMEs One of the most critical steps in this activity aims at transferring knowledge from SMEs to formal machine readable representations which allow systems to reason with such knowledge However this is a costly and error prone task Alleviating the knowledge acquisition bottleneck requires enabling SMEs with the means to produce the desired knowledge representations without the help of KEs This is especially difficult in the case of complex knowledge types like processes The analysis of different application domains uncovers that process knowledge is one of the most frequent knowledge types whose complexity requires specific means to enable SMEs to represent processes in a computational form Additionally such complexity and the increasingly large amount of data that process executions generate in knowledge intensive domains like Biology or Astronomy requires analytical means with high abstraction capabilities to support SMEs in the analysis of such processes This book presents methods and tools that enable SMEs to acquire process knowledge from the domains formally represent such knowledge reason about it and understand process executions by analyzing their provenance We describe the utilization of Problem Solving Methods as the main knowledge artifacts for process acquisition and analysis in two innovative ways First as formalizations of the reasoning strategies needed for processes and second as high level domain independent and reusable abstractions of process knowledge to provide SMEs with interpretations of process executions
