The Wisdom of Crowds James Surowiecki, 2005

In this landmark work NEW YORKER columnist James Surowiecki explores a seemingly counter intuitive idea that has profound implications. Decisions taken by a large group even if the individuals within the group aren't smart are always better than decisions made by small numbers of experts. This seemingly simply notion has endless and major ramifications for how businesses operate, how knowledge is advanced, how economies are or should be organised and how nation states fare. With great erudition Surowiecki ranges across the disciplines of psychology, economics, statistics and history to show just how this principle operates in the real world. Along the way Surowiecki asks a number of intriguing questions about a subject few of us actually understand: economics. What are prices? How does money work? Why do we have corporations? Does advertising work? His answers rendered in a delightfully clear prose demystify daunting prospects. As Surowiecki writes, The hero of this book is in a curious sense an idea, a hero whose story ends up shedding dramatic new light on the landscapes of business, politics and society.

History tells us that when you want something done you turn to a leader right. Wrong. If you want to make a correct decision or solve a problem large groups of people are smarter than a few experts. This brilliant and insightful book shows why the conventional wisdom is so wrong and why the theory of the wisdom of crowds has huge implications for how we run our businesses, structure our political systems and organise our society. Shrewd, meticulous and profound. *The Wisdom of Crowds* will change for ever the way you think about human behaviour.

Please note This is a companion version not the original book. Sample Book Insights 1. The TV show *Who Wants to Be a Millionaire* pitted group intelligence against individual intelligence and every week group intelligence won. The results would never stand up to scientific scrutiny but it is hard to resist the thought that the success of the *Millionaire* audience was a modern example of the same phenomenon that Francis

Galton saw a century ago 2 The group intelligence demonstrated by the jelly beans in the jar experiment is not the same for every single group In many cases there will be a few people who do better than the group which is a good thing since it gives people reason to keep participating 3 The judgment of crowds is good in laboratory settings and classrooms but what happens in the real world 4 The stock market is at least in theory a machine for calculating the present value of all the free cash flow a company will earn in the future The steep decline in Thiokol s stock price compared with the slight declines in the stock prices of its competitors was an unmistakable sign that investors believed that Thiokol was responsible for the Challenger disaster
