Manual of Geospatial Science and Technology John D. Bossler, John R. Jensen, Robert B. McMaster, Chris Rizos, 2001-11-22  
Manual of Geospatial Science and Technology shows how to work across the range of geospatial science and technology whether as a user or as a contractor of services employing these technologies and without either specialist education or substantial experience. The manual covers the fundamentals providing the requisite mathematics, computer science and physics necessary to understand how the technologies work assuming some elementary background in calculus and physics. It also shows how the technologies can be used together and focuses on their commonalities. A number of applications such as mapping and environmental modeling are presented and a Web site accompanies the book. **Manual of Geospatial Science and Technology** John D. Bossler, James B. Campbell, Robert B. McMaster, Chris Rizos, 2010-03-05. Following in the tradition of its popular predecessor the Manual of Geospatial Science and Technology Second Edition continues to be the authoritative volume that covers all aspects of the field both basic and applied and includes a focus on initiating planning and managing GIS projects. This comprehensive resource which contains contributions to the **Public Works Manual**, 2002.

**Manual on Stream Gauging**, 2010. The Manual on Stream Gauging WMO No 519 was first released in 1980. Since then however there have been significant advances both in the approach and the methodologies employed. Consequently at its twelfth session Geneva October 2004 the WMO Commission for Hydrology (CHy) decided to meet the identified needs of the National Hydrological Services by revising the Manual to include the newer technologies that have been introduced over the period and are currently employed in this crucial field. In this context Volume I of the manual encompasses the topics of gauge height measurement, stream velocity and stream discharge whilst Volume II focuses on the discharge rating relationship. LiDAR Light Detection and Ranging also often referred to as 3D laser scanning is an emerging three dimensional mapping technology that employs a laser and a rotating mirror or housing to rapidly scan and image volumes and surficial areas such as rock slopes and outcrops, buildings, bridges and other natural and man made objects. Ground based or terrestrial LiDAR refers to tripod based measurements as opposed to airborne LiDAR measurements made from airplanes or helicopters. The purpose of this report was to determine whether the new technology of ground based

LiDAR could assist FHWA with highway rock slope stability. This report includes discussions of currently available LiDAR hardware and software, the current state of LiDAR for highway geotechnical applications, rock mass characterization, rockfall characterization, as-built 3D measurements, best practices for field scanning and for point cloud data processing, and expected trends in the industry in the near future.
