Topics in Parallel and Distributed Computing Sushil K Prasad, Anshul Gupta, Arnold L Rosenberg, Alan Sussman, Charles C Weems, 2015-09-16 Topics in Parallel and Distributed Computing provides resources and guidance for those learning PDC as well as those teaching students new to the discipline. The pervasiveness of computing devices containing multicore CPUs and GPUs including home and office PCs, laptops and mobile devices is making even common users dependent on parallel processing. Certainly it is no longer sufficient for even basic programmers to acquire only the traditional sequential programming skills. The preceding trends point to the need for imparting a broad based skill set in PDC technology. However the rapid changes in computing hardware platforms and devices, languages supporting programming environments and research advances poses a challenge both for newcomers and seasoned computer scientists. This edited collection has been developed over the past several years in conjunction with the IEEE technical committee on parallel processing TCPP which held several workshops and discussions on learning parallel computing and integrating parallel concepts into courses throughout computer science curricula. Contributed and developed by the leading minds in parallel computing research and instruction. Provides resources and guidance for those learning PDC as well as those teaching students new to the discipline. Succinctly addresses a range of parallel and distributed computing topics. Pedagogically designed to ensure understanding by experienced engineers and newcomers. Developed over the past several years in conjunction with the IEEE technical committee on parallel processing TCPP which held several workshops and discussions on learning parallel computing and integrating parallel concepts.
