metaheuristic methodologies have revolutionized the fields of robotics and machine learning. The book covers the wide range of tools and methods that have emerged as part of the AI revolution from state of the art decision making algorithms for robots to data driven machine learning models. Each chapter offers a meticulous examination of the theoretical foundations and practical applications of mathematical optimization helping readers understand how these methods are transforming the field of technology. This book is an invaluable resource for researchers, practitioners and students. It makes AI optimization accessible and comprehensible equipping the next generation of innovators with the knowledge and skills to further advance robotics and machine learning. While artificial intelligence constantly evolves this book sheds light on the path ahead.

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models Jorge Garza

Ulloa, 2021-11-30 Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models focuses on the relationship between three different multidisciplinary branches of engineering Biomedical Engineering Cognitive Science and Computer Science through Artificial Intelligence models. These models will be used to study how the nervous system and musculoskeletal system obey movement orders from the brain as well as the mental processes of the information during cognition when injuries and neurologic diseases are present in the human body. The interaction between these three areas are studied in this book with the objective of obtaining AI models on injuries and neurologic diseases of the human body studying diseases of the brain spine and the nerves that connect them with the musculoskeletal system. There are more than 600 diseases of the nervous system including brain tumors epilepsy Parkinson's disease stroke and many others. These diseases affect the human cognitive system that sends orders from the central nervous system CNS through the peripheral nervous systems PNS to do tasks using the musculoskeletal system. These actions can be detected by many Bioinstruments Biomedical Instruments and cognitive device data allowing us to apply AI using Machine Learning Deep Learning Cognitive Computing models through algorithms to analyze detect classify and forecast the process of various illnesses diseases and injuries of the human body. Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models provides

readers with the study of injuries illness and neurological diseases of the human body through Artificial Intelligence using Machine Learning ML Deep Learning DL and Cognitive Computing CC models based on algorithms developed with MATLAB and IBM Watson Provides an introduction to Cognitive science cognitive computing and human cognitive relation to help in the solution of AI Biomedical engineering problems Explain different Artificial Intelligence AI including evolutionary algorithms to emulate natural evolution reinforced learning Artificial Neural Network ANN type and cognitive learning and to obtain many AI models for Biomedical Engineering problems Includes coverage of the evolution Artificial Intelligence through Machine Learning ML Deep Learning DL Cognitive Computing CC using MATLAB as a programming language with many add on MATLAB toolboxes and AI based commercial products cloud services as IBM Cognitive Computing IBM Watson IBM Watson Studio IBM Watson Studio Visual Recognition and others Provides the necessary tools to accelerate obtaining results for the analysis of injuries illness and neurologic diseases that can be detected through the static kinetics and kinematics and natural body language data and medical imaging techniques applying AI using ML DL CC algorithms with the objective of obtaining appropriate conclusions to create solutions that improve the quality of life of patients
