*Agile Business Rule Development* Jérôme Boyer, Hafedh Mili, 2011-03-23 Business rules are everywhere Every enterprise process task activity or function is governed by rules However some of these rules are implicit and thus poorly enforced others are written but not enforced and still others are perhaps poorly written and obscurely enforced The business rule approach looks for ways to elicit communicate and manage business rules in a way that all stakeholders can understand and to enforce them within the IT infrastructure in a way that supports their traceability and facilitates their maintenance Boyer and Mili will help you to adopt the business rules approach effectively While most business rule development methodologies put a heavy emphasis on up front business modeling and analysis agile business rule development ABRD as introduced in this book is incremental iterative and test driven Rather than spending weeks discovering and analyzing rules for a complete business function ABRD puts the emphasis on producing executable tested rule sets early in the project without jeopardizing the quality longevity and maintainability of the end result The authors presentation covers all four aspects required for a successful application of the business rules approach

- 1 foundations to understand what business rules are and are not and what they can do for you
- 2 methodology to understand how to apply the business rules approach
- 3 architecture to understand how rule automation impacts your application
- 4 implementation to actually deliver the technical solution within the context of a particular business rule management system BRMS

Throughout the book the authors use an insurance case study that deals with claim processing Boyer and Mili cater to different audiences Project managers will find a pragmatic proven methodology for delivering and maintaining business rule applications Business analysts and rule authors will benefit from guidelines and best practices for rule discovery and analysis Application architects and software developers will appreciate an exploration of the design space for business rule applications proven architectural and design patterns and coding guidelines for using JRules
