Selected Works of E. L. Lehmann Javier Rojo, 2012-01-16 These volumes present a selection of Erich L Lehmann's monumental contributions to Statistics. These works are multifaceted. His early work included fundamental contributions to hypothesis testing, theory of point estimation and more generally to decision theory. His work in Nonparametric Statistics was groundbreaking. His fundamental contributions in this area include results that came to assuage the anxiety of statisticians that were skeptical of nonparametric methodologies and his work on concepts of dependence has created a large literature. The two volumes are divided into chapters of related works. Invited contributors have critiqued the papers in each chapter and the reprinted group of papers follows each commentary. A complete bibliography that contains links to recorded talks by Erich Lehmann and which are freely accessible to the public and a list of Ph D students are also included. These volumes belong in every statistician's personal collection and are a required holding for any institutional library.

Computational Immunology Josep Bassaganya-Riera, 2015-10-21 Computational Immunology Models and Tools encompasses the methodological framework and application of cutting edge tools and techniques to study immunological processes at a systems level along with the concept of multi scale modeling. The book's emphasis is on selected cases studies and application of the most updated technologies in computational modeling discussing topics such as computational modeling and its usage in immunological research, bioinformatics infrastructure, ODE based modeling, agent based modeling and high performance computing, data analytics and multiscale modeling. There are also modeling exercises using recent tools and models which lead the readers to a thorough comprehension and applicability. The book is a valuable resource for immunologists, computational biologists, bioinformaticians, biotechnologists and computer scientists as well as all those who wish to broaden their knowledge in systems modeling. Offers case studies with different levels of complexity. Provides a detailed view on cutting edge tools for modeling that are useful to experimentalists with limited computational skills. Explores the usage of simulation for hypothesis generation helping the reader to understand the most valuable points on experimental setting.

Testing Statistical Hypotheses Erich Leo Lehmann, 1986 **Theory of Point Estimation** Erich L. Lehmann, 1991-06-27 This book is concerned with point estimation in Euclidean sample spaces. The first four chapters deal with exact small sample theory and their approach and organization parallel those of the companion volume *Testing Statistical Hypotheses* (TSH). Optimal estimators are derived according to criteria such as unbiasedness, equivariance and minimaxity and the material is organized around these criteria. The principal applications are to exponential and group families and the systematic

discussion of the rich body of relatively simple statistical problems that fall under these headings constitutes a second major theme of the book A theory of much wider applicability is obtained by adopting a large sample approach The last two chapters are therefore devoted to large sample theory with Chapter 5 providing a fairly elementary introduction to asymptotic concepts and tools Chapter 6 establishes the asymptotic efficiency in sufficiently regular cases of maximum likelihood and related estimators and of Bayes estimators and presents a brief introduction to the local asymptotic optimality theory of Hajek and LeCam Even in these two chapters however attention is restricted to Euclidean sample spaces so that estimation in sequential analysis stochastic processes and function spaces in particular is not covered *Journal of the American Statistical Association* ,1999 **The Cumulative Book Index** ,1992 A world list of books in the English language
