Sustainable Values Sustainable Change A Guide To Environmental Decision Making:

Sustainable Values, Sustainable Change Bryan G. Norton, 2015-12-16 Systematically investigates the philosophical foundations of sustainable development in the context of the history of environmental policy Compelling Choice Sustainability is a nearly ubiquitous concept today but can we ever imagine what it would be like for humans to live sustainably on earth One of the most trafficked terms in the press on university campuses and in the corridors of government sustainability has risen to prominence as a buzzword before the many parties laying claim to it have agreed on how to define it But the term's political currency urgently demands that we develop an understanding of this elusive concept While economists philosophers and ecologists argue about what in nature is valuable and why in *Sustainable Values Sustainable Change* Bryan Norton offers an action oriented pragmatic response to the disconnect between public and academic discourse around sustainability Looking to the arenas in which decisions are made and the problems driving these decisions Norton reveals that the path to sustainability cannot be guided by fixed objectives sustainability will instead be achieved through experimentation incremental learning and adaptive management Drawing inspiration from Aldo Leopold's famed metaphor of thinking like a mountain for a spatially explicit pluralistic approach to evaluating environmental change Norton outlines a new decision making process guided by deliberation and negotiation across science and philosophy Looking across scales to today's global problems Norton urges us to learn to think like a planet An excellent distillation of Norton's extensive and groundbreaking work Ben Minteer Arizona State University author of *Refounding Environmental Ethics* Engaging and important Sahotra Sarkar University of Texas at Austin author of *Environmental Philosophy From Theory to Practice* **The Oxford Handbook of Environmental Ethics** Stephen Mark Gardiner, Allen Thompson, 2017 We live during a crucial period of human history on Earth Anthropogenic environmental changes are occurring on global scales at unprecedented rates Despite a long history of environmental intervention never before has the collective impact of human behaviors threatened all of the major bio systems on the planet Decisions we make today will have significant consequences for the basic conditions of all life into the indefinite future What should we do How should we behave In what ways ought we organize and respond The future of the world as we know it depends on our actions today A cutting edge introduction to environmental ethics in a time of dramatic global environmental change this collection contains forty five newly commissioned articles with contributions from well established experts and emerging voices in the field Chapters are arranged in topical sections social contexts history science economics law and the Anthropocene who or what is of value humanity conscious animals living individuals and wild nature the nature of value truth and goodness practical reasons hermeneutics phenomenology and aesthetics how things ought to matter consequences duty and obligation character traits caring for others and the sacred essential concepts responsibility justice gender rights ecological space risk and precaution citizenship future generations and sustainability key issues pollution population energy food water mass extinction technology and ecosystem management climate change
