## **Topics In Nonlinear Functional Analysis Topics In Nonlinear Functional Analysis:**

*Topics in Nonlinear Functional Analysis* Djairo Guedes de Figueiredo, 1967      **Some Topics in Nonlinear Functional Analysis** Mohan C. Joshi, Ramendra K. Bose, 1985      **Topics in Nonlinear Functional Analysis** L. Nirenberg, 1974 Since its first appearance as a set of lecture notes published by the Courant Institute in 1974 this book served as an introduction to various subjects in nonlinear functional analysis The current edition is a reprint of these notes with added bibliographic references Topological and analytic methods are developed for treating nonlinear ordinary and partial differential equations The first two chapters of the book introduce the notion of topological degree and develop its basic properties These properties are used in later chapters in the discussion of bifurcation theory the possible branching of solutions as parameters vary including the proof of Rabinowitz global bifurcation theorem Stability of the branches is also studied The book concludes with a presentation of some generalized implicit function theorems of Nash Moser type with applications to Kolmogorov Arnold Moser theory and to conjugacy problems For more than 20 years this book continues to be an excellent graduate level textbook and a useful supplementary course text Titles in this series are copublished with the Courant Institute of Mathematical Sciences at New York University      **Topics in Nonlinear Functional Analysis** L. Nirenberg, 2025      *Topics in nonlinear functional analysis* Louis Nirenberg, 1974      *Topics in Nonlinear Functional Analysis* ,1970      **Geometric Properties of Banach Spaces and Nonlinear Iterations** Charles Chidume, 2008-12-21 The contents of this monograph fall within the general area of nonlinear functional analysis and applications We focus on an important topic within this area geometric properties of Banach spaces and nonlinear iterations a topic of intensive research efforts especially within the past 30 years or so In this theory some geometric properties of Banach spaces play a crucial role In the first part of the monograph we expose these geometric properties most of which are well known As is well known among all infinite dimensional Banach spaces Hilbert spaces have the nicest geometric properties The availability of the inner product the fact that the proximity map or nearest point map of a real Hilbert space  $H$  onto a closed convex subset  $K$  of  $H$  is Lipschitzian with constant 1 and the following two identities  $\|x - y\|^2 = \|x\|^2 - 2\langle x, y \rangle + \|y\|^2$  and  $\|x - y\|^2 = \|x\|^2 - 2\langle x, y \rangle + \|y\|^2$  which hold for all  $x, y \in H$  are some of the geometric properties that characterize inner product spaces and also make certain problems posed in Hilbert spaces more manageable than those in general Banach spaces However as has been rightly observed by M. Hatzewinkel many and probably most mathematical objects and models do not naturally live in Hilbert spaces Consequently to extend some of the Hilbert space techniques to more general Banach spaces analogues of the identities and have to be developed

*Topics in Nonlinear Functional Analysis* Djairo Guedes de Figueiredo (Mathematiker, Brasilien), 1967      *Linear and Nonlinear Functional Analysis with Applications* Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory

This book has pedagogical appeal because it features self contained and complete proofs of most of the theorems some of which are not always easy to locate in the literature or are difficult to reconstitute It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis [Nigel Kalton's Lectures in Nonlinear Functional Analysis](#) Adam Bowers,2024-10-02 The main theme of the book is the nonlinear geometry of Banach spaces and it considers various significant problems in the field The present book is a commented transcript of the notes of the graduate level topics course in nonlinear functional analysis given by the late Nigel Kalton in 2008 Nonlinear geometry of Banach spaces is a very active area of research with connections to theoretical computer science noncommutative geometry as well as geometric group theory Nigel Kalton was the most influential and prolific contributor to the theory Collected here are the topics that Nigel Kalton felt were significant for those first dipping a toe into the subject of nonlinear functional analysis and presents these topics in an accessible and concise manner As well as covering some well known topics it also includes recent results discovered by Kalton and his collaborators which have not previously appeared in textbook form A typical first year course in functional analysis will provide sufficient background for readers of this book [Nonlinear Functional Analysis](#) Klaus Deimling,2013-10-09 This text offers a survey of the main ideas concepts and methods that constitute nonlinear functional analysis It features extensive commentary many examples and interesting challenging exercises 1985 edition

**Contributions to Nonlinear Functional Analysis** Eduardo H. Zarantonello,2014-05-10 Contributions to Nonlinear Functional Analysis contains the proceedings of a Symposium on Nonlinear Functional Analysis held in Madison Wisconsin on April 12 14 1971 under the sponsorship of the University of Wisconsin s Mathematics Research Center The symposium provided a forum for discussing various topics related to nonlinear functional analysis from transversality in nonlinear eigenvalue problems to monotonicity methods in Hilbert spaces and some applications to nonlinear partial differential equations Comprised of 15 chapters this book begins by presenting an extension of Leray Schauder degree and an application to a nonlinear elliptic boundary value problem The discussion then turns to the use of degree theory to prove the existence of global continua of solutions of nonlinear eigenvalue problems transversality in nonlinear eigenvalue problems and how variational structure can be used to study some local questions in bifurcation theory Subsequent chapters deal with the notion of monotone operators and monotonicity theory a nonlinear version of the Hille Yosida theorem a version of the penalty method for the Navier Stokes equations and various types of weak solutions for minimizing problems in the spirit of duality theory for convex functionals This monograph will be of interest to students and practitioners in the field of mathematics who want to learn more about nonlinear functional analysis [Topics in Nonlinear Functional Analysis](#), 1973-1974 [By] L. Nirenberg. Notes by R.A. Artino L. Nirenberg,Courant Institute of Mathematical Sciences,1974
