Rodd,G. J. Suski,2014-05-23 This set of proceedings contains the most significant papers presented at the third IFAC Workshop on Artificial Intelligence in Real time Control which was held from September 23 25 1991 in the USA In this workshop although there were still some exotic applications a more practical view of the applications and limitations of current AI technology dominated the participants discussions With its resultant focus on reliability and safety considerations the workshop posed as many questions as it answered It provides an excellent mirror of the current state of the art which these proceedings are intended to illustrate A User's Guide to the N-line Model Norman W. Scheffner,Julie Dean Rosati,1987 This user s manual provides the necessary guidance complete with multiple example applications which include model input and output for using the N line numerical model Capabilities of the model include the simulation of a single or

multiple shore perpendicular structures b single or multiple detached offshore breakwaters and c disposal of material or dredging of material in the coastal zone Model parameters are discussed in order to guide the potential user to a successful application of the model The N line model is versatile easy to use and capable of producing dependable results when used for appropriate applications The documentation in this manual covers only the breakwater subroutine Since conceptual modifications were not made to the original model the original documentation presented in CERC s report MR 83 10 should be obtained by any potential user of the model The N line model is useful in showing qualitative trends for a complex case such as Lakeview Park Lorain Ohio Some of the drawbacks of the program when modeling Lakeview Park such as the inability reach an equilibrium shoreline and the low sinuosity of the shoreline when influenced by breakwater segments could possibly be successfully modeled by modifying the different input parameters such as the ADEAN parameter and or initial shoreline location and or the model code Perhaps then a quantitative verification if the model could be made However in this case the model would have then been tailored to produce a previously known result
