Change Leadership in Emerging Markets Caren Brenda Scheepers, Sonja Swart, 2020-08-03 Based on neuroscience research this book presents and demonstrates a Ten Enablers model as a framework to help change leaders successfully lead and manage change. It focuses on the execution of change processes within volatile and challenging emerging markets with high growth potential. The book first presents the organizational development and change research on which the model is based and discusses the basic neuroscience principles. It then introduces a systematic model of the ten enablers taking readers through the process of change from considering the ethos prior to embarking on it including engagement of stakeholders up to the final phase where change leaders exit the process or the organization. It highlights this circular process through several step by step illustrations supported by examples from emerging markets. Further it includes neuroscience research and principles to help leaders understand and manage change in themselves and others. This well researched and practical book is a valuable resource for students and professionals alike. Illinois Reading Council Journal, 2015

Best Sellers? Akbas, 2018-10-03 Abstract A book's success/popularity depends on various parameters: extrinsic and intrinsic. In this paper we study how the book reading characteristics might influence the popularity of a book. Towards this objective we perform a cross platform study of Goodreads entities and attempt to establish the connection between various Goodreads entities and the popular books/Amazon best sellers. We analyse the collective reading behaviour on Goodreads platform and quantify various characteristic features of the Goodreads entities to identify differences between these Amazon best sellers.

ABS and the other non best selling books We then develop a prediction model using the characteristic features to predict if a book shall become a best seller after one month 15 days since its publication On a balanced set we are able to achieve a very high average accuracy of 88 72% 85 66% for the prediction where the other competitive class contains books which are randomly selected from the Goodreads dataset Our method primarily based on features derived from user posts and genre related characteristic properties achieves an improvement of 16 4% over the traditional popularity factors ratings reviews based baseline methods We also evaluate our model with two more competitive set of books a that are both highly rated and have received a large number of reviews but are not best sellers HRHR and b Goodreads Choice Awards Nominated books which are non best sellers GCAN We are able to achieve quite good results with very high average accuracy of 87 1% and as well a high ROC for ABS vs GCAN For ABS vs HRHR our model yields a high average accuracy of 86 22%
