

Factors and Multiples

Factors are numbers that will divide into an **integer** (a whole number) with **no remainder**.

Multiples are the result of multiplying a number by an integer.

$$\text{FACTOR} \times \text{FACTOR} = \text{MULTIPLE}$$

There are a **finite number of factors** of a number - we can find all the factors.

 **Example** The factors of 18 are: 1, 2, 3, 6, 9, and 18

There are an **infinite number of multiples** of a number - we cannot list them all.

 **Example** The first 5 multiples of 18 are: 18, 36, 54, 72, and 90, but we can continue this list indefinitely.
