Organizing Global Technology Flows Pierre-Yves Donzé, Shigehiro Nishimura, 2013-11-12 Research on the international transfer of technology in economics and management literature has primarily focused on the role of countries and that of companies in particular multinational enterprises MNEs Similarly economic and business historians have tended to view international technology transfer as a way for economically backward countries to acquire new technologies in order to catch up with more developed economies This volume provides a more in depth understanding

of how the international transfer of technologies is organized and in particular challenges the core periphery model that is still dominant in the extant literature. By looking beyond national systems of innovation and statistics on foreign trade, patent registration and foreign direct investment, the book sheds more light on the variety of actors involved in the transfer process, including engineers, entrepreneurs, governments, public bodies, firms, etc. and on how they make use of a broad set of national and international institutions facilitating technology transfer. Put differently, the volume offers a better understanding of the complexity of global technology flows by examining the role and actions of the different actors involved. By bringing together a number of original case studies covering many different countries over the period from the late 19th to the 21st century, the book demonstrates how technology is being transferred through complex processes involving a variety of actors from several countries using the national and international institutional frameworks.

Films that Work Patrick Vonderau, Vinzenz Hediger, 2025-10-01. The history of industrial films is an orphan genre of twentieth century cinema composed of government produced and industrially sponsored movies that sought to achieve the goals of their sponsors rather than the creative artists involved. It seems to have left no trace in filmic cultural discourse. At its height, the industrial film industry employed thousands, produced several trade journals and festival circuits engaged with giants of twentieth century industry like Shell and AT&T, and featured the talents of iconic actors and directors such as Buster Keaton, John Grierson and Alain Resnais. This is the first full length book anthology and annotated bibliography to analyse the industrial film and its remarkable history. Exploring the potential of the industrial film to uncover renewed and unexplored areas of media studies, this remarkable volume brings together renowned scholars such as Rick Prelinger and Thomas Elsaesser in a discussion of the radical potential and new possibilities in considering the history of this unexplored corporate medium.
