

The globe of the Moon has a radius of 10 inches. Find the volume of the globe. Round your answer to the nearest hundredths and use

3.14 for pi

$$V = \frac{4}{3} \pi r^3$$

① find r

$$r = 10$$

② Use the formula

$$V = \frac{4}{3} \pi r^3$$

$$V = \frac{4}{3} (3.14) (10)^3$$

$$V = 4186.67 \text{ in}^3$$

## **Word Problems Finding Volume Of Sphere:**

**Word Problems for Maxima and Minima** Stanley J. Bezuska, 1984      *Methods of Solving Solid Geometry Problems* Ellina Grigorieva, 2025-09-26 This textbook completes the author's series of books on solving complex math problems and is aimed at developing readers' geometric thinking to master the skills of solving solid geometry problems. Written in a friendly manner, it discusses many important and sometimes overlooked topics about polyhedra such as their cross sections, unfolding, inscribed and circumscribed solids, and figures of revolution. Over 350 unique problems with detailed solutions and hints are presented throughout the text, many of which are solved in multiple ways to aid readers with different mathematical backgrounds. If the problem is of historical significance or can be related to a similar problem solved in ancient times, its original solution, historical information about its creation and origin, and its methods are also included. Various applications of stereometry are also explored, including those to chemistry, molecular structures, and crystallography. For example, using Euler's formula for a convex polyhedron, the reader will learn how to explain the structure of various chemical compounds such as how to predict the shape of the truncated icosahedron for the C<sub>60</sub> fullerene molecule, the most powerful antioxidant known today, and to prove why the surface of any fullerene C<sub>2n</sub> consists of  $n/10$  regular hexagons and always only 12 regular pentagons. Demonstrating the connections between different areas of mathematics, *Methods of Solving Solid Geometry Problems* will be of interest to students who want to excel in math competitions and to those who aspire for greater mastery in linear algebra, analytic geometry, calculus, and more advanced topics. It can also be used by teachers to stimulate abstract thinking and bring out the originality of their students.

[ACT Math For Dummies](#) Mark Zegarelli, 2011-06-09 Multiply your chances of success on the ACT Math Test. The ACT Mathematics Test is a 60 question, 60 minute subtest designed to measure the mathematical skills students have typically acquired in courses taken by the end of 11th grade and is generally considered to be the most challenging section of the ACT. *ACT Math For Dummies* is an approachable, easy-to-follow study guide specific to the Math section, complete with practice problems and strategies to help you prepare for exam day. Review chapters for algebra, geometry, and trigonometry. Three practice tests modeled from questions off the most recent ACT tests. Packed with tips, useful information, and strategies, *ACT Math For Dummies* is your one-stop guide to learn, review, and practice for the test.

**Problems on Mapping Class Groups and Related Topics** Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the

combinatorial and co homological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers
