Workflow Handbook 2001:

   Workflow Handbook 2001 Layna Fischer,2000   **On the Move to Meaningful Internet Systems 2005: OTM 2005 Workshops** Zahir Tari,2005-10-11   Modeling and Transformation of Workflows with Temporal Constraints Wolfgang Gruber,2004 Workflow management systems support the execution of business processes they require the modeling of the processes they drive the actual enactment of process instances and they document the business process execution Many different modeling languages and systems have been developed for the design and representation of business processes and workflows as a consequence of different requirements different purposes as well as different schools and modeling philosophies The differences are partly on a conceptual level in the sense that the modeling languages offer different concepts and constructs and partly on the representation level where basically the same constructs are represented differently e g text or graph based This book makes two important contributions to workflow modeling Firstly it provides a metamodel based on abstract modeling concepts which copes with representation differences of workflow descriptions Secondly it introduces a set of equivalence transformations on workflow models Such transformations are an important tool for workflow developments as they allow representing workflows differently for different purposes These transformations are used in algorithms for checking the satisfiability of temporal constraints in workflow definitions Using this apparatus made it possible to develop a sophisticated time management system for workflows which not only checks temporal constraints but can also be used to develop time plans for workflow execution   *Advances in Databases and Information Systems* Georg Gottlob,Andras Benczur,Janos Demetrovics,2004-09-20 This book constitutes the refereed proceedings of the 8th East European Conference on Advances in Databases and Information Systems ADBIS 2004 held in Budapest Hungary in September 2004 The 27 revised full papers presented together with an invited paper were carefully reviewed and selected from 130 submissions The papers are organized in topical sections on constraint databases deductive databases heterogenous and Web information systems cross enterprise information systems knowledge discovery database modeling XML and semistructured databases physical database design and query evaluation transaction management and workflow systems query processing and data streams spatial databases and agents and mobile systems   **Web Information Systems Engineering - WISE 2005** Anne H.H.
