Spacecraft Momentum Control Systems Space Technology Library:

Spacecraft Momentum Control Systems Frederick A. Leve, Mason A. Peck, Brian J. Hamilton, William Bialke, 2025-09-01 With space industry professionals and university students this book offers a practical technical reference for seeking to understand the state of the art in spacecraft momentum control systems The focus is control moment gyroscope CMG technology but general principles of momentum control for example through reaction wheels magnetic torque actuation and other means are presented These key topics are treated in several contexts systems engineering and spacecraft architecture attitude control and dynamics and mission operations The subject matter is developed with theoretical rigor and in terms of practical implementation in flight hardware software This book is the first to address CMG technology in depth let alone from a practitioner's perspective It is also timely given the rise of commercial Earth imaging the imminent need for high torque manipulation of satellites for servicing and assembly the advances in privately built spacecraft including small satellites and the growing popularity of the subject matter in academia over the past two decades The current edition includes exercises suitable for upper level undergraduate courses and graduate level courses in spacecraft attitude dynamics and control spacecraft design and space systems engineering This second edition provides more applications attitude control momentum and nutation dumping isolation system identification systems engineering bearings and structures as well as more in depth discussions of equations of motion as well as the numerics and complexity associated with generalized inverses that are used for steering algorithms Global Formulations of Lagrangian and Hamiltonian Dynamics on Manifolds Taeyoung Lee, Melvin Leok, N. Harris McClamroch, 2017-08-14 This book provides an accessible introduction to the variational formulation of Lagrangian and Hamiltonian mechanics with a novel emphasis on global descriptions of the dynamics which is a significant conceptual departure from more traditional approaches based on the use of local coordinates on the configuration manifold In particular we introduce a general methodology for obtaining globally valid equations of motion on configuration manifolds that are Lie groups homogeneous spaces and embedded manifolds thereby avoiding the difficulties associated with coordinate singularities The material is presented in an approachable fashion by considering concrete configuration manifolds of increasing complexity which then motivates and naturally leads to the more general formulation that follows Understanding of the material is enhanced by numerous in depth examples throughout the book culminating in non trivial applications involving multi body systems This book is written for a general audience of mathematicians engineers and physicists with a basic knowledge of mechanics Some basic background in differential geometry is helpful but not essential as the relevant concepts are introduced in the book thereby making the material accessible to a broad audience and suitable for either self study or as the basis for a graduate course in applied mathematics engineering or physics *Scientific and Technical Aerospace Reports*, 1982 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into

Crassidis, 2014-05-31 This book explores topics that are central to the field of spacecraft attitude determination and control The authors provide rigorous theoretical derivations of significant algorithms accompanied by a generous amount of qualitative discussions of the subject matter The book documents the development of the important concepts and methods in a manner accessible to practicing engineers graduate level engineering students and applied mathematicians It includes detailed examples from actual mission designs to help ease the transition from theory to practice and also provides prototype algorithms that are readily available on the author's website Subject matter includes both theoretical derivations and practical implementation of spacecraft attitude determination and control systems It provides detailed derivations for attitude kinematics and dynamics and provides detailed description of the most widely used attitude parameterization the quaternion This title also provides a thorough treatise of attitude dynamics including Jacobian elliptical functions It is the first known book to provide detailed derivations and explanations of state attitude determination and gives readers real world examples from actual working spacecraft missions The subject matter is chosen to fill the void of existing textbooks and treatises especially in state and dynamics attitude determination MATLAB code of all examples will be provided through an external website **Documentation Abstracts**, 1992 U.S. Government Research & Development Reports, 1969 Bibliography of Scientific and Industrial Reports, 1969
