Spasticity Management A Practical Multidisciplinary Guide:

Spasticity Management Valerie L. Stevenson,Louise Jarrett,2016-04-27 Spasticity is a common symptom that arises in a wide range of neurological conditions Unfortunately a poor understanding and inadequate management of spasticity often results in it having a greater impact on patients than necessary Using a multidisciplinary approach Spasticity Management A Practical Multidisciplinary Guide provides the essenti

Spasticity Management Valerie Stevenson,Louise Jarrett,2006-07-26 Spasticity is a common symptom seen in many neurological conditions notably head injury spinal cord injury stroke cerebral palsy and multiple sclerosis It is also the dominant feature in a number of rarer conditions such as tropical and hereditary spastic paraparesis HSP The fact that it is relevant to many chronic neurological conditions and that the absence of multi disciplinary input can result in progressive disability ensures spasticity management is a prominent feature in the current National Service Framework NSF for long term neurological conditions In the future more long term care for such patients will be done in primary care and the community It is therefore essential that a multi disciplinary approach is used with successful liaison between secondary primary and social care Optimum management of spasticity is dependent on an understanding of its underlying physiology an awareness of its natural history an appreciation of the impact on the patient and a comprehensive approach to minimising that impact which is both multi disciplinary and consistent over time Regrettably these essential requirements are rarely met and consequently inadequately managed spasticity results in a range of painful and disabling sequelae which with the right approach are for the most part preventable Although there are several excellent publications looking at this area none are a truly practical guide relevant to all members of the multi disciplinary team involved in spasticity management Anyone who has been involved in setting up a new service knows how difficult and how protracted a process this can be and if it has been done before why reinvent it The basis of this manual is to collect together the experience and knowledge of such a team who have worked in this area for 10 years now It pulls together all areas including how to set up and develop a service as well as useful management strategies On a practical note it includes complete copies of all of our patient information assessment proformas protocols for different interventions nursing care plans and an integrated care pathway for outpatient spasticity management both as hard copy but also on CD ROM to aid in reproduction These protocols are of course specific to our team but could easily be adapted for use in other centres We are not saying this is the right or only way to run a spasticity service and there is certainly room for improvement but we hope by sharing our experience we can help others to develop their own service thus improving management for all individuals with spasticity

Progressive Multiple Sclerosis Alastair Wilkins, 2012-08-14 Progressive multiple sclerosis places a huge burden on individuals carers and society and treatment options are currently limited. However there have been significant recent advances in understanding progressive disease and this book draws the field together into a single accessible clinically focused text. *Progressive Multiple Sclerosis* sets out the basic science pathology, epidemiology and treatment possibilities in progressive multiple sclerosis. The biological processes underlying disease progression are elucidated as are specific pathophysiological mechanisms. The basic science of axonal degeneration and the clinical understanding of progressive multiple sclerosis are discussed in the context of emerging and future therapies for disease progression as are trials which might be conducted for progressive multiple sclerosis. An overview of biomarkers for the disease is included and existing symptomatic therapies for progressive multiple sclerosis are covered in detail. Each chapter addresses specific aspects of progressive multiple sclerosis providing an extensive review of the current literature and a discussion of the likely mechanisms of tissue injury relevant to the disease. *Progressive Multiple Sclerosis* is ideal for both general neurologists and those with a specialist interest in multiple sclerosis. It will also be of interest to neurologists in training and other medical professionals treating this common disease. Dr Alastair Wilkins is Senior Lecturer in Neurology University of Bristol and Consultant Neurologist at Frenchay Hospital Bristol UK. He researches axonal injury in multiple sclerosis and related disorders

[Neurostimulation and Neuromodulation in Contemporary Therapeutic Practice](#) Denis Larrivee, Seyed Mansoor Rayegani, 2020-09-30 Clinical applications of neurostimulation or neuromodulation are experiencing rapid growth driven by an evolution in neurotechnologies, the limitations of pharmacotherapy and an improving understanding of brain physiology. New methods are promising for intractable or marginally tractable cognitive diseases and for adjunct therapies as they offer greatly improved spatial and temporal resolution thereby promising greater specificity and quicker recovery from disease. This book includes up to date and in depth studies of many of these therapies with chapters addressing their use in epilepsy, spasticity, pain, neurodegeneration and spinal cord dysfunctions among others illustrating their versatility and therapeutic promise for cognitive dysfunction
