### **Recent Advances in Attempts to Improve Medication**

**Adherence - from basic research to clinical practice, volume II** Przemyslaw Kardas,Tamas Agh,Ines Potočnjak,Cristina Mihaela Ghiciuc,Maria Teresa Herdeiro,2024-12-04 This exciting Research Topic is the second volume of Recent Advances in Attempts to Improve Medication Adherence from basic research to clinical practice which you can explore here Adequate implementation of evidence based long term therapies is an issue of utmost importance It has a direct impact on both individual and public health as well as on the sustainability of healthcare systems Unfortunately despite more than half a century of extensive research and practical and awareness raising activities medication adherence remains far from perfect Many reasons are responsible for non adherence and the issue is complicated by the rapid aging of the global society the rising tide of non communicable chronic diseases multimorbidity and associated polypharmacy This might be further exacerbated by certain conditions such as the Covid 19 pandemic However one thing is perfectly clear medication non adherence is no longer merely perceived as a patient problem In fact medication adherence depends on many non patient related factors and thus is an important indicator of the quality of care Therefore instead of blaming patients need to be supported in their therapeutic journeys Thus all the stakeholders need to collectively create adherence enabling environments and support patients in the execution of their therapies

### **Mental Health, Social Media, and the Meta**

Dov Greenbaum ,Nazanin Alavi,2024-11-11 One of the most damaging externalities from the recent pandemic has been the rise in mental health issues Many psychiatric disorders have strong genetic components and although the extent of the genetic influence for many conditions has been extensively tested by genome wide association studies GWAS there remains much to be understood regarding the genetics of these health issues Twin studies for example have found a relatively high rate of inheritance for depression and anxiety disorders To better appreciate the role that genetics plays in these disorders it is useful to understand the extent to which other factors also contribute to the condition Other major contributing factors to mental disorders are the environment and psychological factors These environmental and psychological concerns have been further exacerbated by the growth of social media and the requirement especially for young adults and teenagers to always be on It is likely that the metaverse in whatever form it ultimately takes will further exacerbate these conditions On the other hand social media and the metaverse can be tools to help those suffering from mental health conditions Online therapists and

bots can provide frontline care to those who can't or won't go to an in person therapy session. AI can be employed to provide some forms of therapy in light of the growing demand for licensed therapists and the limited supply. **Advancements and Challenges in Implementation Science: 2022** Nick Sevdalis, 2024-03-07. Presents evidence based treatment options ranging from conservative treatments, physical medicine, surgery, and many minimally invasive techniques.
