Professional Search Engine Optimization with PHP Cristian Darie, Jaimie Sirovich, 2007-04-18 Maybe you're a great programmer or IT professional but marketing isn't your thing. Or perhaps you're a tech-savvy search engine marketer who wants a peek under the hood of a search engine optimized web site. Search engine marketing is a field where technology and marketing are both critical and interdependent because small changes in the implementation of a web site can make you or break you in search engine rankings. Furthermore, the fusion of technology and marketing know-how can create web site features that attract more visitors. The mission of this book is to help web developers create web sites that rank well with the major search engines and to teach search engine marketers how to use technology to their advantage. We assert that neither marketing nor IT can exist in a vacuum and it is essential that they not see themselves as opposing forces in an organization. They must work together. This book aims to educate both sides in that regard. **Professional Search Engine**

Optimization with ASP.NET Cristian Darie, Jaimie Sirovich, 2007-09-04 Search engine optimization (SEO) is not only the job of the marketing department. It must be considered from a web site's inception and throughout its lifetime by you, the web site developer. Making changes to the architecture of a web site and modifying presentation techniques can dramatically increase search engine rankings and traffic levels. Written for the ASP.NET developer or tech-savvy marketer, this unique reference provides techniques for creating and maintaining web sites optimized for search engines. You'll discover how to facilitate the indexing of your site as well as how to leverage specific technologies and services for site promotion. You will understand the role of web site architecture in search engine optimization and explore various topics therein. Knowing this will help you to develop a site that achieves great search engine rankings. What you will learn from this book: Understand the criteria that influence search engine rankings. Create keyword-rich URLs using ASP.NET ISAPI_Rewrite and UrlRewriter.NET. Use HTTP Headers to properly indicate the status of web documents. Create optimized content and cope with duplicate content effectively. Avoid being the victim of black hat SEO techniques. Understand and implement geo-targeting and cloaking. Use site maps effectively for users as well as search engines. SEO enhancements that can easily be applied to an existing web site. Build a search engine friendly e-commerce catalog. Who this book is for: This book is for ASP.NET developers who need to incorporate search engine optimization principles into their web applications as well as marketers who want to gain a better understanding of the technologies involved in search engine marketing. Enhance Your Knowledge. Advance Your Career. Wrox Professional guides are planned and written by working programmers to meet the real-world needs of programmers, developers, and IT professionals.
