Plant Genetics and Molecular Breeding Pedro Martínez-Gómez,2019-07-11 The development of new plant varieties is a long and tedious process involving the generation of large seedling populations for the selection of the best individuals While the ability of breeders to generate large populations is almost unlimited the selection of these seedlings is the main factor limiting the generation of new cultivars Molecular studies for the development of marker assisted selection MAS strategies are particularly useful when the evaluation of the character is expensive time consuming or with long juvenile periods The papers published in the Special Issue Plant Genetics and Molecular Breeding report highly novel results and testable new models for the integrative analysis of genetic phenotyping and transmission of agronomic characters physiology flowering ripening organ development genomic DNA regions responsible for the different agronomic characters transcriptomic gene expression analysis of the characters proteomic proteins and enzymes involved in the expression of the characters metabolomic secondary metabolites and epigenetic DNA methylation and histone modifications approaches for the development of new MAS strategies These molecular approaches together with an increasingly accurate phenotyping will facilitate the breeding of new climate resilient varieties resistant to abiotic and biotic stress with suitable productivity and quality to extend the adaptation and viability of the current varieties

Mineral Biofortification in Crop Plants for Ensuring Food Security Mirza Hasanuzzaman,Muhammad Suleman Tahir,Mohsin Tanveer,Adnan Noor Shah,2023-12-03 This book provides a comprehensive summary of the recent advances in the biofortification of plants under climate change

and how it affects food security globally. The need for mineral biofortification to eradicate or alleviate malnutrition through sustainable agriculture is also discussed. Biofortification of edible plants is considered the most appropriate approach to alleviate nutritional problems and nutrient deficiencies. In contrast, biofortification focuses on improving the nutritional content of the region's current agricultural biodiversity while preserving its habits and customs. Emphasis is also placed on recent advances and developments in omics, particularly metabolomics and related techniques, to unravel the potential alterations in plants caused by biofortification. The book brings together eminent scientists to present the latest developments in the field. This timely publication addresses practical scenarios of biofortified food production and climate change. The book focuses on the methods, techniques, and environmental changes used to enhance and improve agricultural products. This book is one of the first to provide information on the use of modern biotechnologies to modify crops for health benefits. It also examines the mechanisms of the plant responses to genetically induced biofortification, the production and responses of fortified plants under climate change, and their effects on food security. The book will be useful for students and researchers, especially crop scientists, environmental scientists, biotechnologists, botanists, and agronomists, to understand the techniques and mechanisms of biofortification and responses of biofortified plants under climate change.

Phosphorus Management in Crop Production Nand Kumar Fageria, Zhenli He, Virupax C. Baligar, 2017-02-17

The world population is projected to reach nine billion by 2050 and in the coming years, global food demand is expected to increase by 50% or more. Higher crop productivity gains in the future will have to be achieved in developing countries through better natural resources management and crop improvement. After nitrogen, phosphorus (P) has more widespread influence on both natural and agricultural ecosystems than any other essential plant element. It has been estimated that 5.7 billion hectares of land worldwide contain insufficient amounts of available P for sustainable crop production and P deficiency in crop plants is a widespread problem in various parts of the world. However, it has been estimated that worldwide minable P could last less than 40 years. For sustaining future food supplies, it is vital to enhance plant P use efficiency. To bring the latest knowledge and research advances in efficient management of P for economically viable and environmentally beneficial crop production in sustainable agriculture, Phosphorus Management in Crop Production contains chapters covering functions and diagnostic techniques for P requirements in crop plants, P use efficiency and interactions with other nutrients in crop plants, management of P for optimal crop production and environmental quality, and basic principles and methodology regarding P nutrition in crop plants. The majority of research data included are derived from many years of field, greenhouse, and lab work; hence the information is practical in nature and will have a significant impact on efficient management of P fertilizers to enhance P use efficiency, improve crop production, promote sustainable agriculture, and reduce P losses through eluviation, leaching, and erosion to minimize environmental degradation. A comprehensive book that combines practical and applied information, Phosphorus Management in Crop Production is an excellent reference for students, professors, agricultural

research scientists food scientists agricultural extension specialists private consultants fertilizer companies and government agencies that deal with agricultural and environmental issues

The Molecular and Physiological Basis of Nutrient

Use Efficiency in Crops Malcolm J. Hawkesford,Peter Barraclough,2011-09-21 Efforts to increase efficient nutrient use by crops are of growing importance as the global demand for food fibre and fuel increases and competition for resources intensifies The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops provides both a timely summary of the latest advances in the field as well as anticipating directions for future research The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops bridges the gap between agronomic practice and molecular biology by linking underpinning molecular mechanisms to the physiological and agronomic aspects of crop yield These chapters provide an understanding of molecular and physiological mechanisms that will allow researchers to continue to target and improve complex traits for crop improvement Written by leading international researchers The Molecular and Physiological Basis of Nutrient Use Efficiency in Crops will be an essential resource for the crop science community for years to come Special Features coalesces current knowledge in the areas of efficient acquisition and utilization of nutrients by crop plants with emphasis on modern developments addresses future directions in crop nutrition in the light of changing climate patterns including temperature and water availability bridges the gap between traditional agronomy and molecular biology with focus on underpinning molecular mechanisms and their effects on crop yield includes contributions from a leading team of global experts in both research and practical settings

Nutrition of Crop Plants Md. Abdul Baset Mia,2015

Crop nutrition is an essential discipline of plant science of crop production The importance of crop nutrition for increasing yield and the quality of crops is difficult to explain In simple words crop nutrition is the study of uptake and utilization of elements for the growth and development of crop plants This book includes the classification of essential nutrients in various aspects with special emphasis on the physiological and biochemical functions and their uptake process through the membrane Much emphasis has been given on the root structure and rhizosphere in relation to nutrient uptake and their assimilation in the cellular level The goal of this book is to establish a thorough understanding of plant nutrition It is a textbook for agriculturists researchers in the field of crop science students and academicians and for crop cultivators as a whole Finally it is a consolidated book comprising different areas of plant nutrition and the stakeholders will benefit from a book like this

The Botany of Crop

Plants Wilfred William Robbins,1917

Nutrient Use Efficiency: from Basics to Advances Amitava Rakshit,HariKesh Bahadur Singh,Avijit Sen,2014-12-26 This book addresses in detail multifaceted approaches to boosting nutrient use efficiency NUE that are modified by plant interactions with environmental variables and combine physiological microbial biotechnological and agronomic aspects Conveying an in depth understanding of the topic will spark the development of new cultivars and strains to induce NUE coupled with best management practices that will immensely benefit agricultural systems safeguarding their soil water and air quality Written by recognized experts in the field the book is intended to

provide students scientists and policymakers with essential insights into holistic approaches to NUE as well as an overview of some successful case studies In the present understanding of agriculture NUE represents a question of process optimization in response to the increasing fragility of our natural resources base and threats to food grain security across the globe Further improving nutrient use efficiency is a prerequisite to reducing production costs expanding crop acreage into non competitive marginal lands with low nutrient resources and preventing environmental contamination The nutrients most commonly limiting plant growth are N P K S and micronutrients like Fe Zn B and Mo NUE depends on the ability to efficiently take up the nutrient from the soil but also on transport storage mobilization usage within the plant and the environment A number of approaches can help us to understand NUE as a whole One involves adopting best crop management practices that take into account root induced rhizosphere processes which play a pivotal role in controlling nutrient dynamics in the soil plant atmosphere continuum New technologies from basic tools like leaf color charts to sophisticated sensor based systems and laser land leveling can reduce the dependency on laboratory assistance and manual labor Another approach concerns the development of crop plants through genetic manipulations that allow them to take up and assimilate nutrients more efficiently as well as identifying processes of plant responses to nutrient deficiency stress and exploring natural genetic variation Though only recently introduced the ability of microbial inoculants to induce NUE is gaining in importance as the loss immobilization release and availability of nutrients are mediated by soil microbial processes

Omics and Genome Editing Kartika Sharma,2025-03-15 This book offers up to date research on genome editing and omics technologies from renowned academics with established backgrounds from throughout the globe The world population is expected to touch 9 10 billion by 2050 and to feed the growing population 50% more food must be produced globally than is currently produced Nonetheless it is a difficult challenge to increase the food output of the currently existing crops on available land Over the past few decades traditional crop enhancement techniques like plant breeding and other agricultural technology have made a significant contribution to food and nutritional security With the use of strong technologies genome editing strategies can significantly improve the productivity and efficiency of current agricultural practices Discovering the underlying mechanisms influencing features of economic value has been made possible through genome editing through CRISPR Cas9 primer and base editing and OMICs through genomics proteomics metabolomics transcriptomics and phenomics This book provides a wealth of information on omics and genome editing approaches and their application to develop abiotic biotic and climate tolerant crops as well as RNA interference next generation sequencing and metabolomics for sustainable crop production Researchers are actively using both genome editing and omics for crop improvement however there is limited literature offered in a single source Undergraduate and postgraduate students researchers policymakers and stakeholders will find this book to be an invaluable resource
