

VOLVO PENTA INBOARD DIESEL

D6-435

320 kW (435 hp) crankshaft power acc. to ISO 8695

Diesel performance for marine use

Volvo Penta's 6-cylinder D6-435 is developed from the latest design in modern diesel technology. The engine has common rail fuel injection system, double overhead camshafts, 4 valves per cylinder, turbocharger and aftercooler. Together with a large swept volume and the EVC system (Electronic Vessel Control), this results in world-class diesel performance, combined with low emissions.

World-class performance

The common rail fuel injection system, controlled by EVC, in combination with a large swept volume, ensures outstanding torque during the acceleration, with virtually no sign of smoke. This, matched with the engine's high load-carrying capability, creates a sporty feeling and power, when needed.

Compact and robust

The engine is lightweight and extremely compact for its large swept volume and high output. With the rear-end transmission, driving the high-pressure injection pump and the camshafts, a high degree of integrated systems, a high-efficiency aftercooler, a maintenance performed with very few hoses, and a fully symmetric engine, the package simply gets that compact.

The rigid cast-iron cylinder block and head, ladder frame, and exactly controlled (up to three steps) fuel injection gives excellent onboard comfort with low noise and vibration levels.

EVC-D

EVC-D, a new generation of the proven Electronic Vessel Control offers the best driver experience available.

The new ergonomically designed controls engage smoothly and allow for maneuvering with fingertip precision in any situation. Integrated pushbuttons give easy access to functions such as Low Speed, Cruise Control and Single Lever Control, which allows for safe and easy boating.

Complete the helm with your choice from the full range of easy-to-read gauges and displays including the new 7" color display. Add the trip computer function for accurate fuel management and minimized environmental impact. Engine synchronization is of course standard in twin installations.

A propulsion package fully matched, tested and supported by one company
Volvo Penta's hydraulically shifted reverse gear has been specially developed with a view to increasing the standard of comfort on board.

Matched with the characteristics of the D6 engine, the hydraulic shifting mechanism and a gear technology that uses bevel gears throughout the gear train, we have developed a complete package for high torque, operational reliability and reduction of engine noise and vibrations.

The combination of 18° down angle, large drop center and small dimensions provides for optimized installations. V-drives are also available.

In order to get full benefit of the EVC system the reverse gear is equipped with electric shifting valves.

Meeting new emission standards

The common rail injection system in combination with electronics and an advanced combustion system are setting new standards in minimizing noxious emissions and particulates. The engine complies with IMO NOx limits and the comprehensive emission requirements EU RCD and US EPA Tier 2.
