*Business Intelligence Strategy and Big Data Analytics* Steve Williams, 2016-04-08

Business Intelligence Strategy and Big Data Analytics is written for business leaders, managers and analysts people who are involved with advancing the use of BI at their companies or who need to better understand what BI is and how it can be used to improve profitability. It is written from a general management perspective and it draws on observations at 12 companies whose annual revenues range between 500 million and 20 billion. Over the past 15 years my company has formulated vendor neutral business focused BI strategies and program execution plans in collaboration with manufacturers, distributors, retailers, logistics companies, insurers, investment companies, credit unions and utilities among others. It is through these experiences that we have validated business driven BI strategy formulation methods and identified common enterprise BI program execution challenges. In recent years terms like big data and big data analytics have been introduced into the business and technical lexicon. Upon close examination the newer terminology is about the same thing that BI has always been about: analyzing the vast amounts of data that companies generate and/or purchase in the course of business as a means of improving profitability and competitiveness. Accordingly we will use the terms BI and business intelligence throughout the book and we will discuss the newer concepts like big data as appropriate. More broadly the goal of this book is to share methods and observations that will help companies achieve BI success and thereby increase revenues, reduce costs or both. Provides ideas for improving the business performance of one's company or business functions. Emphasizes proven practical step by step methods that readers can readily apply in their companies. Includes exercises and case studies with road tested advice about formulating BI strategies and program plans.
