Successive Transformations Grade 6:

Addition and Subtraction Thomas P. Carpenter, James M. Moser, Thomas A. Romberg, 2020-08-15 A hallmark of much of the research on children's thinking in the 1970s had been the focus on explicit content domains. Much of this research had been represented by an eclectic collection of studies sampled from a variety of disciplines and content areas. However, in the few years before this publication, research in several content domains has begun to coalesce into a coherent body of knowledge. Originally published in 1982, the chapters in this work represent one of the first attempts to bring together the perspectives of a variety of different researchers investigating a specific, well-defined content domain. This book presents theoretical views and research findings of a group of international scholars who are investigating the early acquisition of addition and subtraction skills by young children. Together, the contributors bring a blend of psychology, educational psychology, and mathematics education to this topic. Fields of interest such as information processing, artificial intelligence, early childhood, and classroom teaching and learning are included in this blend. Grunow, 2001 This document is designed to facilitate the state of Wisconsin's Planning Curriculum in Mathematics. Planning Curriculum in Mathematics complements Wisconsin's Model Academic Standards for Mathematics and puts into action the standards in the latter document. It is hoped that these materials will serve as springboards for contemplation by curriculum planners, developers, implementers, and evaluators as they build district programs. This document offers a focus on teaching and learning, inclusion of research, discussion of issues, and practical assistance. This book contains 1) an extensive compendium of resources, 2) reflects the underlying belief that mathematics must be taught and learned with understanding, and 3) is a policy piece. Chapters include 1) We Are All Learners of Mathematics, 2) Teaching and Learning Mathematics with Understanding, 3) Curriculum Instruction and Assessment, 4) Designing Professional Development To Promote Understanding, 5) Putting the Standards into Action, 6) Using Research To Guide Mathematics Program Development, 7) Foundations for Consideration in Mathematics Program Development, 8) How
