*A First Course in Optimization Theory* Rangarajan K. Sundaram, 1996-06-13 Divided into three separate parts this book introduces students to optimization theory and its use in economics and allied disciplines A preliminary chapter and three appendices are designed to keep the book mathematically self contained

*Mathematics for Economists* Malcolm Pemberton, Nicholas Rau, 2001 This innovative text for undergraduates provides a thorough and self contained treatment of all the mathematics commonly taught in honours degree economics courses It is suitable for use with students with and without A level mathematics

**Dynamic General Equilibrium Modelling** Burkhard Heer, Alfred Maussner, 2005-12-05 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models Many mathematical tools are needed to solve these models The book presents various methods for computing the dynamics of general

equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail Part II discusses methods for solving heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the business cycle or the overlapping generations model Through an accompanying home page to this book computer codes to all applications can be downloaded

**Dynamic General Equilibrium Modeling** Burkhard Heer, Alfred Maßner, 2024-02-21 Contemporary macroeconomics is built upon microeconomic principles with its most recent advance featuring dynamic stochastic general equilibrium models The textbook by Heer and Maußner acquaints readers with the essential computational techniques required to tackle these models and employ them for quantitative

analysis This third edition maintains the structure of the second dividing the content into three separate parts dedicated to representative agent models heterogeneous agent models and numerical methods At the same time every chapter has been revised and two entirely new chapters have been added The updated content reflects the latest advances in both numerical methods and their applications in macroeconomics spanning areas like business cycle analysis economic growth theory

distributional economics monetary and fiscal policy The two new chapters delve into advanced techniques including higher order perturbation weighted residual methods and solutions to high dimensional nonlinear problems In addition the authors present further insights from macroeconomic theory complemented by practical applications like the Smolyak algorithm Gorman aggregation rare disaster models and dynamic Laffer curves Lastly the new edition places special emphasis on

practical implementation across various programming languages accordingly its accompanying web page offers examples of computer code for languages such as MATLAB GAUSS Fortran Julia and Python
