*Research and Development in Intelligent Systems XXIV* Max Bramer,Frans Coenen,Miltos Petridis,2007-12-03 An agent in a multi agent system MAS has to generate plans for its individual goal but these plans may con ict with those that are already being scheduled or executed by other agents It must also be able to complete its planning and resolution of these con icts within a reasonable time to have an

acceptable quality plan Although we adopt hierarchical planning HP for example see 7.12 using the decision theoretic planning DTP approach 6 for efficient planning it is not trivial to apply HPO to MAS In HP appropriate abstract plans are selected level by level to maximize the utility  $U(p)$  where  $p$  is the expected plan comprising a sequence of primitive actions However in the MAS context conflicts between agents affect the efficiency and quality of resulting plans When a conflict is found at lower levels an additional sophisticated process for avoiding it conflict resolution must be invoked and some extra actions such as waiting for synchronization and detouring may have to be added to the plan The conflict resolution process may become costly or fail Even a single conflict if it is difficult to resolve will result in a plan with considerably lower quality than it otherwise would have As a result in multi agent systems the second or third best plans may result in better overall performance
