A Play of Bodies Brendan Keogh, 2025-10-28 An investigation of the embodied engagement between the playing body and the videogame how player and game incorporate each other Our bodies engage with videogames in complex and fascinating ways Through an entanglement of

eyes on screens ears at speakers and muscles against interfaces we experience games with our senses But as Brendan Keogh argues in *A Play of Bodies* this corporal engagement goes both ways as we touch the videogame it touches back augmenting the very senses with which we perceive Keogh investigates this merging of actual and virtual bodies and worlds asking how our embodied sense of perception constitutes and becomes constituted by the phenomenon of videogame play In short how do we perceive videogames Keogh works toward formulating a phenomenology of videogame experience focusing on what happens in the embodied engagement between the playing body and the videogame and anchoring his analysis in an eclectic series of games that range from mainstream to niche titles Considering smartphone videogames he proposes a notion of co attentiveness to understand how players can feel present in a virtual world without forgetting that they are touching a screen in the actual world He discusses the somatic basis of videogame play whether games involve vigorous physical movement or quietly sitting on a couch with a controller the sometimes overlooked visual and audible pleasures of videogame experience and modes of temporality represented by character death failure and repetition Finally he considers two metaphorical characters the hacker representing the hegemonic masculine gamers concerned with control and configuration and the cyborg less concerned with control than with embodiment and incorporation

Differences Between the Security Models of Android and iOS Samuel Hopstock, 2019-07-24 Seminar paper from the year 2018 in the subject Computer Science IT Security grade 1.0 Technical University of Munich course Seminar Mobile Application Security language English abstract Smartphones are being used as the preferred device for as many things as possible in today's world This is why having secure phones that are resilient against attacks targeting their users' data becomes more and more important This paper tries to assess what measures device vendors have taken to ensure those attacks will not be successful Because the market is mostly divided between Google's Android and Apple's iOS we put our focus on those two operating systems and compare their respective security models Additionally this comparison will be evaluating how those models have changed over time since the beginning of the smartphone era around 2010 The last part of this analysis will take a look at a different view on smartphones the perspective of so called power users Those are people that do not only use their smartphone for downloading some apps and surfing the Internet but rather want to do some lower level customization to the operating system by rooting their Android device or jailbreaking their iPhone This process of gaining full privileges on the phone not only creates advantages for the user but can also have rather negative implications on the device's security How exactly does this affect the protections implemented by the vendor
