assigned to a virtual machine. This can then use the full power of the graphics card but each virtual machine requires its own graphics card. The costs per user increase. To resolve this issue, NVIDIA has released GRID technology. This makes it possible for several virtual machines to share a graphics card but still maintain full performance similar to what already happens in all virtual environments with the CPU. You will learn what to consider when planning a vGPU environment and learn step by step how to deploy it with Citrix and NVIDIA. This is followed by monitoring the environment and correcting known errors.
