**Understanding Suicide and Its Prevention** Federico Sanchez,2010-06-15 Finally a book that explains suicide using the latest research in suicidology A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular This is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author s fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders The author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community s standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in everyday language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how

these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnestic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors **Handbook of Assessment and Treatment Planning for Psychological Disorders, 2/e** Martin M. **Understanding Suicide** Philippe Courtet, 2016-03-05 In this book international experts address a range of key current issues relating to suicide. The opening chapters discuss nosology, definitions, clinical determinants and conceptual models of the suicide process and consider the evidence regarding potential biomarkers of suicide risk based on neuroscientific research. Adopting a neo-Durkheimian perspective, the role of various social factors in the genesis of suicidal behavior is then explored in depth. Practical, user-friendly tools that facilitate risk assessment by clinicians are provided and detailed consideration is given to efficient and innovative strategies for the prevention of suicide and the treatment of suicidal behavior such as psychotherapy, psychopharmacological approaches and effective organization of care, including surveillance and the use of online tools. The final part of the book focuses on the need for and development of a personalized approach within the field of suicide prevention. *Why People Die by Suicide* Thomas Joiner, 2005 Drawing on extensive clinical and epidemiological evidence as well as personal experience, Thomas Joiner provides the most coherent and persuasive explanation ever given of why and how people overcome life's strongest instinct, self-preservation.

**The Evolution of Suicide** C A Soper, 2018-07-23 A fascinating read. Contrary to what the title might suggest, this is an upbeat exploration of suicide with a positive message. Jeanine Connor Therapy Today December 2018 This thought-provoking volume offers a distinctly human evolutionary analysis of a distinctly human phenomenon: suicide. Its pain and brain model posits animal adaptations as the motivator for suicidal escape and specific human cognitive adaptations as supplying the means, while also providing a plausible explanation for why only a relatively small number of humans actually take their own lives. The author hypothesizes two types of anti-suicide responses: active and reactive mechanisms prompted by the brain as suicide deterrents.

Proposed as well is the intriguing prospect that mental disorders such as depression and addiction long associated with suicidality may serve as survival measures Among the topics covered Suicide as an evolutionary puzzle The protection against suicide afforded to animals and young children Suicide as a by product of pain and human cognition Why psychodynamic defenses regulate the experiencing of painful events Links between suicidality and positive psychology The anti suicide role of spiritual and religious belief In raising and considering key questions regarding this most controversial act The Evolution of Suicide will appeal to researchers across a range of behavioral science disciplines At the same time the book's implications for clinical intervention and prevention will make it useful among mental health professionals and those involved with mental health policy Improving Care to Prevent Suicide Among People with Serious Mental Illness National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Children, Youth, and Families,Health and Medicine Division,Board on Health Care Services,2019-03-19 Suicide prevention initiatives are part of much broader systems connected to activities such as the diagnosis of mental illness the recognition of clinical risk improving access to care and coordinating with a broad range of outside agencies and entities around both prevention and public health efforts Yet suicide is also an intensely personal issue that continues to be surrounded by stigma On September 11 12 2018 the National Academies of Sciences Engineering and Medicine held a workshop in Washington DC to discuss preventing suicide among people with serious mental illness The workshop was designed to illustrate and discuss what is known what is currently being done and what needs to be done to identify and reduce suicide risk Improving Care to Prevent Suicide Among People with Serious Mental Illness summarizes presentations and discussions of the workshop
