Publishing Textbook of Suicide Assessment and Management Robert I. Simon, Robert E. Hales, 2006 Suicide risk assessment is a core competency that mental health professionals are expected to acquire during their training yet the reality of potential suicides can prove daunting for busy practitioners faced with an overload of information on the subject. This book meets that challenge head on by providing clinically useful information for anyone encountering patients at risk for suicide. The American Psychiatric Publishing Textbook of Suicide Assessment and Management calls on the authority of 40 expert contributors including members of the APA's Workgroup on Suicidal Behaviors who developed the APA Practice Guideline for the Assessment and Treatment of Patients With Suicidal Behaviors reflecting a wide range of clinical and forensic experience. The authors provide informative cases accompanied by analysis that integrates clinical findings with textual discussion along with chapter end key points in order to help practitioners understand demographic gender and cultural variables in suicide risk use psychological tests and scales in assessment assess risk in special populations such as children and adolescents and the elderly and jail and prison inmates determine treatment options psychopharmacological ECT psychodynamic and collaborative or split treatment manage suicide risk in the context of major mental disorders depression bipolar disorder schizophrenia anxiety personality disorders and substance related disorders with specific guidelines for risk assessment address suicide risk in outpatient emergency and inpatient and partial hospitalization settings patient safety versus freedom of movement and strategies for increasing the safety factor in various aspects of practice. In addition to addressing the many facets of patient care including cautioning against a suicide risk factor created by limitations of benefits in managed care situations the book also discusses clinician care how practitioners can cope with the anxiety and fatigue arising from treating suicidal patients the professional's role following a patient's suicide legal issues involving standard of care and liability and risk management guidelines for avoiding malpractice litigation. Suicide risk exists along an ever changing continuum. This book underscores that risk assessment is a process not an event. It clearly shows how sound assessment can lead to more effective management of patients at high risk for suicide.

Treatment of Suicidal Patients in Managed Care James M. Ellison, 2008-08-13 Suicide remains all too common in the United States As the ninth leading cause of death responsible for 30 000 deaths annually it is also one of the more preventable causes of death. Increasingly mental health clinicians must care for suicidal patients within managed care systems. Managed care's cost driven focus on rapid assessment and triage narrowly restrictive hospital admission criteria and abbreviated inpatient stays have resulted in poorer clinical care and increased opportunities both for adverse outcomes such as suicide and for clinician liability. Bringing together a unique mix of clinicians authorities and administrators from private practice and managed care Treatment of Suicidal Patients in Managed Care offers practical guidance on how to improve care and reduce risk for suicidal patients. Contributors explore a wide range of topics. Hospitalization Emphasizes the increased importance of the initial assessment when managed care systems shorten or deny hospitalization for suicidal patients and of knowing whom to call within the managed care system. Includes alternative
