What Happens One Second After:

Moving without a Body Stamatia Portanova, 2024-02-06 A radically empirical exploration of movement and technology and the transformations of choreography in a digital realm Digital technologies offer the possibility of capturing storing and manipulating movement abstracting it from the body and transforming it into numerical information In *Moving without a Body* Stamatia Portanova considers what really happens when the physicality of movement is translated into a numerical code by a technological system Drawing on the radical empiricism of Gilles Deleuze and Alfred North Whitehead she argues that this does not amount to a technical assessment of software's capacity to record motion but requires a philosophical rethinking of what movement itself is or can become Discussing the development of different audiovisual tools and the shift from analog to digital she focuses on some choreographic realizations of this evolution including works by Loie Fuller and Merce Cunningham Throughout Portanova considers these technologies and dances as ways to think rather than just perform or perceive movement She distinguishes the choreographic thought from the performance a body performs a movement and a mind thinks or choreographs a dance Similarly she sees the move from analog to digital as a shift in conception rather than simply in technical realization Analyzing choreographic technologies for their capacity to redesign the way movement is thought *Moving without a Body* offers an ambitiously conceived reflection on the ontological implications of the encounter between movement and technological systems

Levitation Steve Richards, 2015-11-01 *Levitation* is it possible Can human beings really leave the ground through the power of the mind alone How can this extraordinary defiance of gravitational force be induced at will These are some of the questions answered in this startling book that lays bare the occult meditational techniques by which the mind can lift the body off the ground This book gives you the facts the history the controversies the theories and above all the centuries old secrets of levitation that have remained in the hands of a few adepts until now It is an essential guide for anyone interested in the power of the mind the legends of the East Transcendental Meditation the occult and metaphysical practices

WHAT IS TIME? WHAT IS THE ORIGIN OF TIME AND THE SENSE OF DURATION? Samuel K. K. Blankson, 2017-03-30 The cosmos itself is not governed or regulated by time but by chance so cosmology can never appear consistently logical Time and regulation are human concepts The points and instants notion is no longer credible Points are our basic intellectual tools since the instants arise through moving from point to point making time discrete A N Whitehead's definition of time as a sequence of non interacting moments is credible Russell also said There is no longer a universal time And Professor Eddington observed that time does not flow The Minkowski 4 D geometry is seen as plainly false and so time travel is impossible There are no days in nature at all There is only one constant day All existence is daylight The nights are freakish and irrelevant The earth's rotations are just flippant shadows over reality Nothing in astronomy happens only by night and not by day Logically deduced time appears to be human and we can solve the problem of how it passes by too

Understanding Word and Sentence G.B. Simpson, 1991-01-14 Research concerning structure

and processing in the mental lexicon has achieved central prominence within cognitive psychology and psycholinguistics. Historically however much of the research on the lexicon focussed not on its role in language comprehension but as a medium for studying semantic memory. This picture has changed in recent years with much more research examining the role of lexical processes and output in language comprehension. Gathered together in this volume is the work of some of those researchers who are responsible for this shift of emphasis. Chapters deal with the role of sentence contexts in word recognition processes involved in the activation and enhancement of lexical information and the interaction of lexical and syntactic information in sentence processing. A wide range of theoretical and empirical issues relating to language understanding are discussed. Dorothea Beale of Cheltenham Elizabeth Raikes, 1908 The Australian Musical News

Main Street Sinclair Lewis, 1920 Main Street tells the tale of a big city girl who marries a physician and settles in a small town in the Midwest only to fall victim to the narrow mindedness and unimaginative natures of the town's residents.

Introduction by Thomas Mallon Copyright Libri GmbH All rights reserved **The Dog Fancier**, 1924 The Soul Fallacy Julien Musolino, 2015 Most Americans believe they possess an immaterial soul that will survive the death of the body. In sharp contrast the current scientific consensus rejects the traditional soul although this conclusion is rarely discussed publicly. In this book a cognitive scientist breaks the taboo and explains why modern science leads to this controversial conclusion. In doing so the book reveals the truly astonishing scope and power of scientific inquiry drawing on ideas from biology, psychology, neuroscience, philosophy and the physical sciences. Much more than chronicling the demise of the traditional soul the book explores where soul beliefs come from why they are so widespread culturally and historically how cognitive science offers a naturalistic alternative to religious conceptions of mind and how postulating the existence of a soul amounts to making a scientific claim. Although the new scientific view of personhood departs radically from traditional religious conceptions the author shows that a coherent meaningful and sensitive appreciation of what it means to be human remains intact. He argues that we do not lose anything by letting go of our soul beliefs and that we even have something to gain. Throughout the book takes a passionate stand for science and reason. It also offers a timely rejoinder to recent claims that science supports the existence of the soul and the afterlife. **Munsey's Magazine**, 1917 **Notes for one year's**
