Engineering Zoran Gajic, Zoran Gajić, M. Lelić, 1996 The book represents a modern treatment of classical control theory and application concepts Theoretically it is based on the state space approach where the main concepts have been derived using only the knowledge from a first course in linear algebra Practically it is based on the MATLAB package for computer aided control system design so that the presentation of the design techniques is simplified The inclusion of MATLAB allows deeper insights into the dynamical behaviour of real physical control systems which are quite often of high dimensions Continuous time and discrete time control systems are treated simultaneously with a slight emphasis on the continuous time systems especially in the area of controller design Instructor's Manual 0 13 264730 3 **Advanced Modern Control System Theory and Design** Stanley M. Shinnars, 1998-12-01 **Modern Control System Theory and Design, Solutions Manual** Stanley M. Shinnars, 1992-09-16 Offers unified treatment of conventional and modern continuous and discrete control theory and demonstrates how to apply the theory to realistic control system design problems Along with linear and nonlinear digital and optimal control systems it presents four case studies of actual designs The majority of solutions contained in the book and the problems at the ends of the chapters were generated using the commercial software package MATLAB and is available free to the users of the book by returning a postcard contained with the book to the MathWorks Inc This software also contains the following features utilities created to enhance MATLAB and several of the MathWorks toolboxes Tutorial File which contains the essentials necessary to understand the MATLAB interface other books require additional books for full comprehension Demonstration m file which gives the users a feel for the various utilities included OnLine HELP Synopsis File which reviews and highlights the features of each chapter Modern Control Systems Richard C.
